NOTES

- A. The tube shall be of the post deflection accelerator type and of a design such that a change of $\pm 10\%$ in the Anode 2 voltage shall produce no appreciable change in the cut off voltage.
- B. When viewing the screen with the tube positioned such that the keyway of the spigot is at an angle of 30° to the left of the vertical, a positive voltage on pin 5 will deflect the spot to the right, and a positive voltage on pin 8 will deflect the spot upwards.
