# RS 2002

The RS 2002 is a coaxially based transmitting tetrode. The grid sections are constructed in metal-ceramic technique. This tube is particularly suited for application in commercial SSB communication transmitters. Maximum plate dissipation is 120 kW or 150 kW respectively, according to the method of cooling.

## General Data

### FILAMENT

Filament voltage = 22 volts  
Filament current  $\approx$  350 amps } thoriated tungsten cathode

Emission current 280 A at DC plate voltage = DC screen voltage =  
DC grid voltage = 700 volts

Grid-screen amplification factor 4 at DC plate voltage 3000 volts  
DC screen voltage = 800 up to 1200 volts  
DC plate current = 10 amps

Transconductance 130,000  $\mu\text{mhos}$  at DC plate voltage =  
3000 volts, DC screen voltage = 1000 volts  
DC plate current = 10 amps

### INTERELECTRODE CAPACITANCES
