

**L-Band Pencil-Tube Oscillator-Amplifier**

1090 Mc/s

500 W PEAK

These Units<sup>d</sup> are Designed to Implement New Airborne Transponder Systems**ELECTRICAL****Heater, for Unipotential Cathode**

Voltage (AC or DC) . . . . .	$6.3 \pm 10\%$	V
Current at 6.3 V (Total) . . . . .	0.66 max	A

Frequency . . . . .	1090	Mc/s
---------------------	------	------

**RF Coaxial Output**

Terminal . . . . .	Sealectro No. 50-047-0129	
Characteristic impedance (approx.) . . . . .	50	$\Omega$

Output VSWR . . . . .	1.5:1	
-----------------------	-------	--

All phase angles

**MECHANICAL**

Operating Position . . . . .	Any	
------------------------------	-----	--

Dimensions and Terminal Connections . . . . .	See Dimensional Outlines	
---	--------------------------	--

Weight (Approx.) . . . . .	7 oz	
----------------------------	------	--

**ENVIRONMENTAL**

The units will remain stable within  $\pm 2.5$  Mc/s in frequency and  $\pm 3$  dB in peak power output (from nominal conditions) under any combination of the following conditions:

Vibration . . . . .	Curve IV of MIL-E-5400 and Curve IV MIL-T-5422E	
Shock . . . . .	15	g
Ambient Temperature . . . . .	-54 to 95	$^{\circ}$ C
Altitude . . . . .	30000	ft
Output VSWR . . . . .	1.5:1	
All phase angles		
Plate and Heater Voltage Variation . . . . .	$\pm 10$	%
Duty Factor . . . . .	0.01	

**GRID-PULSED OSCILLATOR—CLASS C****Absolute-Maximum Ratings**

For a maximum "ON" time<sup>a</sup> of 12.5<sup>b</sup> microseconds  
in any 2500-microsecond interval

DC Plate Voltage . . . . .	1100	V
Each unit		
Peak Oscillator Grid Current . . . . .	0.5	A
Peak Amplifier Cathode Current . . . . .	2	A
Peak Plate Current		
Oscillator . . . . .	0.7	A
Amplifier . . . . .	1.5	A
Plate Dissipation . . . . .	18	W
Total		
Peak Heater-Cathode Voltage		
Heater negative with respect to cathode . . . . .	60	V
Heater positive with respect to cathode . . . . .	60	V

## TYPICAL OPERATION

With Rectangular Wave Shape in Grid-Drive Circuit at 1090 Mc/s

With duty factor<sup>c</sup> of 0.01 and pulse duration of  
0.45 microsecond

DC Plate Voltage. . . . .	1000	V
Each unit		
Oscillator Grid Bias. . . . .	-80	V
Amplifier Cathode Bias. . . . .	25	V
DC Plate Current. . . . .	20	mA
Total		
Useful Power Output . . . . .	500	W
At peak of pulse		

<sup>a</sup> "ON" time is defined as the sum of the duration of all individual pulses which occur during the indicated interval. Pulse duration is defined as the time interval between the two points on the pulse at which the instantaneous value is 70% of the peak power value. The peak value is defined as the maximum value of a smooth curve through the average of the fluctuations over the top portion of the pulse.

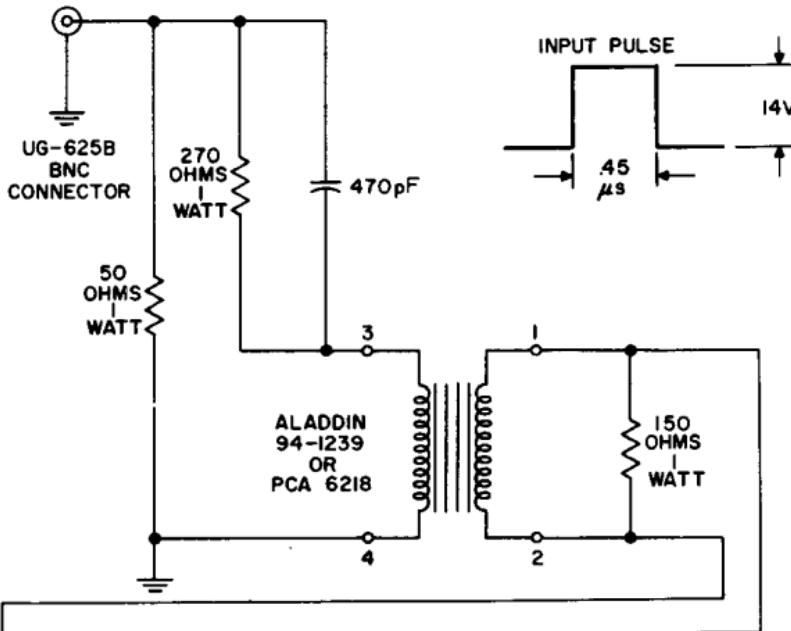

<sup>b</sup> This value is for continuous pulsing. The "ON" time can be 25 microseconds when the units are operated 10 minutes per hour.

<sup>c</sup> Duty factor is the product of pulse duration and repetition rate. For variable pulse durations and pulse repetition rates, the duty factor is defined as the ratio of the time "ON" to total elapsed time in any 2500-microsecond interval.

<sup>d</sup> The ruggedized oscillator-amplifier combination is built to satisfy all AIMS/FAA (Army Integrated Meteorological Systems) requirements.

## RECOMMENDED GRID-PULSE AMPLIFIER (MODULATOR)

\* 0.3  $\mu$ H WINDING ON A NON-INDUCTIVE  
50-OHM VITREOUS RESISTOR.

At peak of pulse		

- a The ruggedized oscillator-amplifier combination is built to satisfy all AIMS/FAA (Army Integrated Meteorological Systems) requirements.
- b With 56 pulses in 100 microsecond interval.
- c Tested per methods described in MIL-E-5400 and MIL-T-5422.
- d Duty factor is the product of pulse duration and repetition rate. For variable pulse durations and pulse repetition rates, the duty factor is defined as the ratio of the time "ON" to total elapsed time in any 2500-microsecond interval. "ON" time is defined as the sum of the duration of all individual pulses which occur during the indicated interval. Pulse duration is defined as the time interval between the two points on the pulse at which the instantaneous value is 70% of the peak power value. The peak value is defined as the maximum value of a smooth curve through the average of the fluctuations over the top portion of the pulse.
- e This value is for continuous pulsing. The duty factor can be 0.25 for any interval up to 100 microseconds in length as long as the long-term duty factor does not exceed 0.01.
