

LQP- CATHODE RAY TUBE

The E.T.C. 4QP- is a rectangular 3-1/4 inches by 2-3/4 inches flat face, electrostatic focus and deflection cathode ray tube. The 4QP- is designed for a minimum useful scan of 2-1/2 inches horizontal and 2-1/4 inches vertically and a high light output with very low deflection factors. These design features permit the use of this tube in compact transistorized equipment.

This tube also features a linear Post-Accelerator and a Geometry adjust electrode for maximum deflection uniformity and minimum pattern distortion.

# GENERAL CHARACTERISTICS

# Electrical Data

Heater Voltage Heater Current			.3 \displays 10% Volts \displays 10% Amperes	
Focusing Method Deflecting Method			Electrostatic Electrostatic	
Phosphor Fluorescence Phosphorescence Persistence  Direct Interelectrode Cathode to all other Grid #1 to all other D1 to D2 D3 to D4 D1 to all D2 to all D3 to all D4 to all	r electrodes	No. 2 Green Green Long	No. 7 Blue Yellow Long  Max. 5.3 uuf 6.8 uuf 2.8 uuf 1.0 uuf 6.3 uuf 6.7 uuf 3.8 uuf 3.8 uuf	No. 11 Blue Short

# Mechanical Data

Overall Length	13-1/2 🛊 1/4	Inches
Greatest Bulb Diameter (Diagonal)	/_ —	Inches
Minimum Useful Screen (Rounded Corner)		Inches
Bulb Contacts (Deflection Electrode)	Pins	
Bulb Contact	J1-22	
Base (Small shell, 12 Pin Duodecal)	Special	
Basing	Special	

## Base Alignment

D3D4 trace aligns with Pin #4

Positive voltage on Dl deflects the beam approx. towards Pin #4 Positive voltage on D3 deflects the beam approx. towards Pin #1

TYPICAL OPERATING CONDITIONS			
For Accelerator Voltage of 575 to Post-Accelerator Current (Note 1) Focusing Voltage	·1/2		
CIRCUIT DESIGN VALUES			

Focusing Current for any operating condition -15 to \$10 Microamperes Grid #1 Circuit Resistance 1.5 Max. Megohms Resistance in any deflecting-electrode circuit (Note 7) 1 Megohms

#### CATHODE RAY TUBE

#### NOTES

- 1 Measured with the beam cutoff. All readings of beam current shall be in addition to the readings obtained for post-accelerator current.
- 2 Visual extinction of the undeflected, focused spot.
- 3 Measured in accordance with MIL-E-1 specifications with a beam current of 15 uAdc.
- 4 Centered with respect to the tube face and with the tube shielded.
- 5 The Post-Accelerator spiral band lower end and the Geometry Adjust are connected internally. By voltage potential adjustment on this electrode combination, pin cushion and barrel distortions are minimized.
- 6 Normally operated at accelerator potential linearity improvements can be obtained by proper adjustment of deflection plate shield voltage which controls the edge effect of the 300 plate field.
- 7 It is recommended that the deflection electrode circuit resistance be approximately equal.
