

EXTREME ENVIRONMENT NON-BURN IMAGE ORTHICON TYPE WL-7198A

The WL-7198A image orthicon is a non-burn image orthicon, that is completely environmentally adapted to military applications, having high sensitivity and resolution. The WL-7198A is both mechanically and electrically interchangeable with the WL-7198 and will operate in any commercially available image orthicon camera.

The WL-7198A ruggedized design will permit operation in airborne equipment and other applications where a reliable and environmentally adapted tube is required. This tube will pass MIL-E-5272 vibration, shock, temperature and humidity specifications as detailed in data. The WL-7198A has an S-10 photosurface and the proven long-life target of the WL-7611.

This special target, developed by Westinghouse, is essentially free of after-image or picture-sticking and raster-burn throughout life when operating in the temperature range of 40 to 55°C. Resolution and gray-scale are equal to or better than the WL-7198.

In the first 50 hours of use, the WL-7198A can be cleared of target burns created by exposure of 3×10^{-3} foot candles maximum photocathode illumination for periods up to 1 hour duration.

The WL-7198A has a spectral response comparable to that of the human eye. Good grey-scale rendition of colors is possible inasmuch as it is insensitive to infrared rays which would otherwise cause color masking.
