## ATMIRALTY SIGNAL & RADAR ESTABLISHMENT

### VALVE ELECTRONIC

Specification AD/CV490/Issue 2.	SECURITY		
Dated: 12.12.50.	Specification	Valve	
To be read in conjunction with K1001.	Unclassified	Unclassified	

TYPE OF VALVE: - High Vacuum Rectifie	MARKING					
Diode.  CATHODE: - National of Indirectly Heated, Oxide Coated,			See K1001/4.			
ENVELOPE: - Hard Glass.  FROTOTYPE: - VX6021.			BASE Edison-type Screw Lamp Cap E.40/45 (Goliath)			Amelt)
			See K1001 A	14/D13.1 AM	[ 1015-1	mac
RATING		Note	***************************************	ECTIONS	9	
Heater Voltage (V)	4.0	A,B	Base thread button		See Note A.	
Heater Current (A)	4.0		T.C.	: A		
Max. Anode Dissipation (W)	32	B,C	TOP CAP			
Max. Peak Inverse Voltage Under short pulse conditions (kV)	27	D	See K1001/AI/D5.			
Under faulty conditions (kV)		E	Dimension	Min.	Max.	1
Under rectifier conditions (no load) (kV)	20		AD (mm) BE (mm)	9•27 11•43	9.78 16.51	Andly
Max. Peak Anode Current Under short pulse conditions (A) Under rectifier conditions (A)	10 1.0	D F	DIMENSIONS See K1001/AI/D1.			
Max. RMS Anode Current (mA)	350		Dimension	Min.	Max.	1
Internal Resistance (ohms)	105	G	A (mm) B (mm)	-	240 58	
			PACKAGING See K1005.			
	N	OTES	Мь	UNTING POSITI	DN	my

- As the cathode is connected to the centre of the filament the HT return should preferably go to the centre tap of the heater transformer. If this cannot be done, the ratings for peak and mean anode current should be reduced.
- The anode voltage must not be applied for 30 seconds after switching on the heater.
- This may be increased to 38 W provided the Peak Inverse Voltage does not exceed 75% of the rated value.
- These ratings are for pulses of the order of 2 ms or less. D.
- Under short pulse conditions, provided fault does not persist for more than 50 milliseconds.
- If necessary a resistance of up to 1600 chms must be added to the anode circuit to limit the peak switching surge to 6 A.
- At Ia = 8 A.

# CV490

## TESTS

To be performed in addition to those applicable in K1001.

	Test Con	ditions	m b	Limits		No.	Vada
	Vh (V)	Va (V)	Test	Min.	Max.	Tested	Not <b>e</b>
a	4.0	<b>a</b>	Ih		4-4	100%	
ъ	<b>4.</b> 0	200 Applied through a resistance of 264 ohms	Ia Vacuum Test (mA)	320	450	100%	1
C	(i) 4.0 (ii) 3.6	800 1 micro- second pul- ses at a prf not greater than 550 c/s	(i) Internal resistance at full cathods heating to be called R <sub>1</sub> (ohms)  (ii) Internal resistance at reduced cathode heating (ohms)	85	132 R <sub>1</sub> + 25 or 142 which ever is the smaller	100% 100%	
d	4.0	Valve to be run for 15 minutes in a Voltage Doubler circuit at Va = 7.75 kV RLS (50 c/s sine wave), Load = 130,000 ohms, Condenser = 1 \text{\text{\text{MS}}}/\text{Valve}, Limiting resistance = 1,600 ohms.		which appre spark abnor heati	ng of de or	100%	
6	4.0	35,000 pulsed P.I.V.	Pulse test: Duration 1 minute. Not rejected valves, which show tendency to spark (more than 5 times per minute) to be submitted to test 'f'.	Reject valves which spark more than 20 times per minute.		100%	2
f	4.0	27,000 pulsed P.I.V.	Pulse Test Duration 2 minutes.	No sparking permitted.		Selected in test	2

### NOTES

- 1. No portion of the anode may show hot spots during this test. No visible ionisation glow may occur and Va must remain constant to within + % during the last three minutes of test.
- This test is to be done in an approved pulse tester, giving pulses of 2 to 3
  microseconds duration with a repetition frequency 500 c/s.

- Page 1. Cathode. Amend "Indirectly Heated" to read "Directly or Indirectly Heated." SPECIFICATION AD/CV4.90, ISSUE 2., DATED 12.12.50
  AMENDMENT No. 1 (i.)
- Base. Amend "K1001 A14/D13.1" to read "K1001/A IV/D13.1." (ii)
- Top Cap. Under "Dimension" amend "D" to "A" and "L" to "B". (iii)
- NOTE A. Delete the words "As the cathode is connected to the centre of the filament." (iv)
- (v) Insert additional "Box" under "PACKAGING" as follows:-
