NOTES

1. For all the above tests the valve shall be mounted in a suitable water jacket and the water flow adjusted to 3 gallons per minute.
2. For tests to clauses 'a', 'b', 'd', 'e' and 'f', the filament shall be heated by 50 c/s current and the common return of both anode and grid circuits shall be to the centre point of the filament transformer secondary.
3. The value of reverse grid current in test 'b' shall not exceed the specified value and shall not be rising at the conclusion of a ten minute test.
