VALVE ELECTRONIC

CV2167

Marich Specification MOS(A)/CV2167	SECURITY			
Issue 2 Dated 15.1.53 To be read in conjunction with Klool, excluding clauses 5.2.	Specification	<u>Valve</u>		
5.3 and 5.8.	UNCLASSIFIED	UNCLASSIFIED		

Indi	cates	a	change
------	-------	---	--------

TYPE OF VALVE	- 1	MARKING See Kl001/4.				
CATHODE	-	Indirectly-heated				Dee nacci, 4.
ENVELOPE	- (Copper				BASE
PROTOTYPE	- '	VX4080				None
	RATING				CONNECTIONS & DIMENSIONS	
					Note	
Heater Voltage Heater Current Operating Free	(V) (A) (MC/s)	6.3 0.8 9080	В			
Max. Mean Input Power			(W)	120		See Drawing on Page 4.
TYPICAL OPERAT	ING (CONDITIONS				
Peak Anade Vol	(kV)	12	AC			
Peak Anede Cui			(A)	9	AC	
Field Strongth Peak Power Out			(Gauss) (kW)	5000 3 0	AC AC	

NOTES

- A. When operating under these conditions the magnetron must be air-cooled so that the temperature of the block does not exceed 140°C.
- B. A mechanical tuning adjustment is provided so that the valve can be set to operate precisely at this frequency.
- C. These operating conditions apply for

 T_p = 0.2 μ sec. prf = 3500 pps. VSWR = 1.5 : 1 max. in No. 16 waveguide.

Under these conditions the heater voltage should be reduced to 4V when the HT is applied.

CV2167

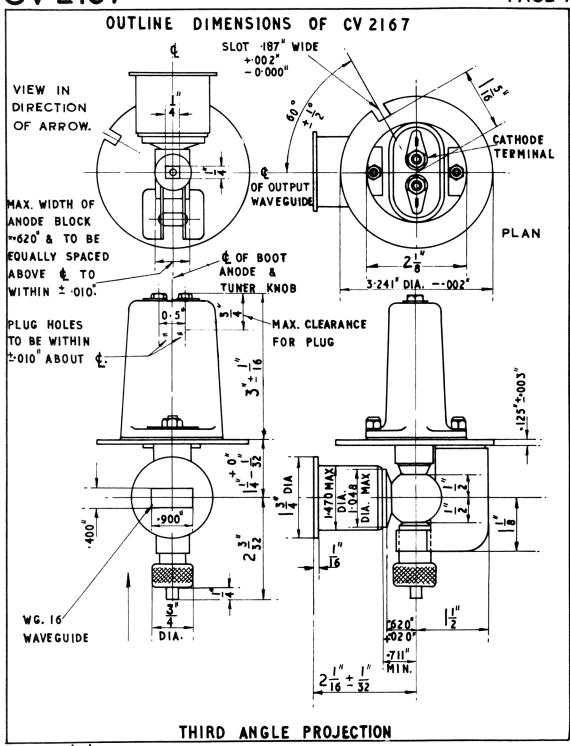

To be performed in addition to those applicable in KlOOl

CV2167/2/2

NOTES

- Applicable over whole tuning range. Tests shall be performed at HF, LF limits and at the nominal centre frequency as in Test (c).
- 2. For the above tests, the temperature of the anode block shall not exceed 140°C.
- The valve shall be operated with full heater voltage applied for not more than 2 mins. before the application of HT and then reduced to 4V.
- 4. The max. rate of rise of the voltage pulse shall not be less than 120 kV/usec at the operating voltage.
- 5. The valve shall be coupled by means of Coupling I-S Cat. No. 2830003 to Waveguide No. WC16, which shall be terminated in a resistive load giving a VSWR better than 1.1: 1.
- 6. Measured with a VSWR of 1.5: 1 varied through all phases.
- 7. The RF bandwidth shall be measured at one-quarter power by means of the Spectrum Analyser.
- 8. No pulse shall be missing when viewed on the Spectrum Analyser. No double traces of voltage and current shall appear during a 5 sec. interval while the peak current is varied over the specified range.
- 9. The time of fall of the current pulse shall be less than 0.2 jusec when measured between the points where the amplitude is 20% and 80% of the average amplitude over 80% of the flat portion of the pulse.
- 10. The "±5%" tolerance on the magnetic field strength allows for measurement uncertainties of ±2% and a setting tolerance of ±3%.

ELECTRONIC VALVE SPECIFICATIONS

SPECIFICATION MOS(A)/CV2167 ISSUE 2 DATED 15.1.53

AMENDMENT NO. 1

Page 2 Clause e Frequency Pulling

in column headed "Limits Max." Amend "15" to "20".

T.V.C. for R.A.E.

June 1960 N.17178/D.

ELECTRONIC VALVE SPECIFICATIONS

SPECIFICATION MOS(A)/CV2167, ISSUE 2, DATED 15.1.53

AMENDMENT No. 2

- 1. Page 1.
 - (i) Specification Authority (top of page).

- Delete "MINISTRY OF SUPPLY DLRD(A)/TRE" and substitute "MINISTRY OF TECHNOLOGY - DLRD/RRE".
 - (ii) Specification Title (top left hand box).
 - Delete "Specification MOS(A)/CV2167" and substitute
 - "Specification Min. Tech./CV2167".
- Test clauses (b) to (k) inclusive. 2. Page 2.

August 1967

- (i)In the column headed "Field Strength (Gauss)" amend "5000 ± 50" to read "5000 ±5%".
- (ii) In the column headed "Note" insert "10".
- 3. Page 3. Insert new note 10 as follows:-The " 5%" tolerance on the magnetic field strength "10. allows for measurement uncertainties of - 2% and a setting tolerance of - 3%".
 - T.V.C. for R.R.E.
