TYPE OF VALVE - Reliable High Vacuum Half-wave Rectifier with flexible leads			<u>MARKING</u>
CATHODE - Directly-heated			See K1001/4
ENVELOPE - Glass			
PROTOTYPE - VX3159, CV.2289.			
<u>RATING</u>			<u>BASE</u>
Filament Voltage (V)			None
Filament Current (A)			
Max Peak Inverse Voltage (kV)			
Max Peak Inverse Voltage with direct switching. (kV)			
Max Peak Anode Current (mA)			
Max Mean Rectified Current (mA)			
Max Shock (short duration) (g)			
Max Acceleration (continuous operation) (g)			
<u>TYPICAL OPERATING DATA</u>			<u>CONNECTIONS</u>
<u>Sinusoidal Input</u>			<u>Lead</u> <u>Electrode</u>
RMS Input Voltage (kV)			Top Lead Anode
Rectified Voltage (kV)			Bottom Leads Filaments
Rectified Current (uA)			
Reservoir Condenser (50 c/s wkg; 15% ripple) (uF)			<u>DIMENSIONS</u>
<u>Pulse Input</u> (see Note C)			See drawing on page 3
Leak Input Voltage (kV)			
Rectified Output Voltage (kV)			Dimension (mm) Min. Max.
Rectified Output Current (uA)			Overall length - 53
Optimum Reservoir Condenser (uF)			Diameter - 13
			Lead length 30
<u>CAPACITANCE (pF)</u>			<u>MOUNTING POSITION</u>
Ca-f (nom)			
<u>NOTES</u>			
A. All limiting values are absolute.			
B. This rating applies to circuits where the anode voltage rises at approximately the same rate as the filament voltage, e.g. in fly-back and RF oscillator circuits. When used in power input circuits with full AC anode voltage applied on switching, the maximum peak inverse voltage is 10 kV.			
C. PRF = 20 kc/s; Tp = 5/u secs.			

CV4061

TESTS
To be performed in addition to those applicable in K1001

AVI/5.6	Inoperatives Filament Anode Current (1)		2.5 2.5 2.5		If Ia	0.13 4.0	0.17 -	A mA
ATX/2.5	<u>GROUP F</u> Electrical re test after 28-day holding period.			100%				
AVI/5.6	Inoperatives		0.5					

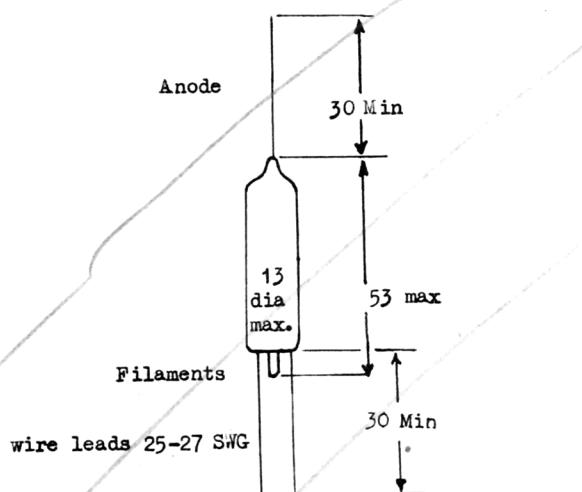

NOTES

- The valve shall be tested in a half-wave rectifier circuit with a 5.3 kW r.m.s. 50 c/s input voltage applied through a total external impedance of 100,000 ohms including effective transformer impedance. The load resistance shall be adjusted to give 100 μ A nom. Reservoir condenser = 0.1 μ F.

Alternatively, the test may be performed as follows :

$$\begin{aligned}
 F &= 100 \text{ kc/s approx.} \\
 R_s &= 15 \text{ M} \\
 R_L &= 80 \text{ M} \\
 C &= 0.001 \mu\text{F.} \\
 \text{P.I.V.} &= 15 \text{ kW (nominal)} \\
 I_{DC} &= 100 \mu\text{A.}
 \end{aligned}$$

- The load conditions shall be maintained for 60 secs. There shall be no persistent sparking, blue glow or distortion of the electrodes.
