##  <br> Industrial Cathode Ray Tubes Supplement 1

## Supplement 1

The facilities and organisation of Thorn Brimar Limited meet the requirements of the M.O.D. (P.E.) Defence Standard 05-21 and BS9000.

## B Buman

## Thorn Brimar Limited

A Member of the THORN EMI Group

This volume is a supplement to the third edition of the Brimar CRT Data Handbook. The original Handbook is published in two volumes.

## Volume 1 Operational recommendations Safety recommendations Aspects of Design Reports <br> Volume 2 Tube index <br> Tube selection tables Design data of phosphors <br> Design data of accessories <br> Design data of tubes

This supplement contains data on new tube types designed to maintain the Brimar range as the most comprehensive available and to meet the requirements of modern equipment.

This supplement should be read in conjunction with Volumes 1 and 2
Extreme care has been taken in the preparation of the data to ensure these volumes are as comprehensive, accurate and up to date as possible at the time of going to press. Before designing tubes into equipment, it is advisable to check with the sales office or authorised agents that availability and data remain unaltered.

## HEALTH AND SAFETY AT WORK ACT 1974

Attention is drawn to the recommendations under this heading in the Safety Recommendations in Volume one.

## WARNING

These tubes should be used in accordance with their published ratings, and in conformity with the operational recommendations of the company's data handbook. The company will not entertain claims for loss or damage where this advice has been disregarded.

## APPLICATIONS SERVICE

The Applications Laboratory provide a free advisory service to equipment manufacturers.
THORN BRIMAR LIMITED,
Applications Laboratory, Mollison Avenue. Brimsdown, Enfield, Middx. EN3 7NS.

Selection tables

New graticule

This index is a comprehensive list of all the data in Volume 2 and the Supplement. It shows in which volume and section the data may be found. The status column shows that a number of tubes for which data is contained in Volume 2 are now considered as maintenance only types and that others are obsolescent types which are available from Thorn Brimar as long as stocks last, but no further manufacture of these types will take place. The replacement type column offers alternative types and commercial equivalents in some cases.

The facilities and organisation provided by Thorn Brimar Limited meet the requirements of the M.O.D. (P.E.) Defence Standard 05-21 and BS9000.

## HEALTH AND SAFETY AT WORK ACT, 1974

Attention is drawn to the recommendations under this heading in the Operational Recommendations.

## WARNING

These tubes should be used in accordance with their published ratings, and in conformity with the Operational Recommendations of the Company's data handbook. The Company will not entertain claims for loss or damage where this advice has been disregarded.

## Thorn Brimar Limited

## Graticule

Not to be scaled
All dimensions in mm
This dual purpose internal graticule is suitable for direct view or for illumination with an appropriate light guide.
The graticule $X$ and $Y$ axes will be on the tube face axes $\pm 2^{\circ}$.
The centre of the graticule will be within 1 mm of the mechanical centre of the face.
This graticule is specially designed for use on certain mesh p.d.a. tubes, for example D18-160GH/102.

Thorn Brimar Limited
Page 1, Issue 1.
BRIMAR

## GENERAL -SCAN COILS

Scan coils can be used for $110^{\circ}$ tubes with 28 mm diameter necks.
A short ferrite ring is used with saddle wound line and toroidal wound field coils. Shift rings and a neck clamp assembly are provided.

These scan coils are for use in low voltage transistor deflection circuits, and have a low impedance field winding to permit operation with an integrated circuit drive amplifier.

To reduce raster distortion picture shape correction magnets may be placed on the pegs around the periphery of the plastic moulding.

## ELECTRICAL DATA

Type of winding
Inductance at 1 kHz (Tol. $\mathrm{X} \pm 5 \%, \mathrm{Y} \pm 8 \%$ )
Typical resistance at $20^{\circ} \mathrm{C}$
Deflection current, peak to peak, for full screen deflection

Saddle Toroidal

All dimensions in mm

Page 2, Issue 1.

## GENERAL - SCAN COILS

Scan coils can be used for $90^{\circ}$ tubes with 28 mm diameter necks.
A short ferrite ring is used with saddle wound line and toroidal wound field coils. Shift rings and a neck clamp assembly are provided.

These scan coils are for use in low voltage transistor deflection circuits, and have a low impedance field winding to permit operation with an integrated circuit drive amplifier.
To reduce raster distortion picture shape correction magnets may be placed on the pegs around the periphery of the plastic moulding.

GENERAL - SCAN COILS
Scan coils for use on $110^{\circ}$ and $90^{\circ}$ tubes with 28 mm diameter necks.
A short ferrite ring is used with saddle wound line and toroidal wound field coils. Shift rings and a neck clamp assembly are provided.
These scan coils are for use in low voltage transistor deflection circuits, and have a low impedance field winding to permit operation with an integrated eircuit drive amplifier.

To reduce raster distortion eight additional picture shape correction magnets TBY15 are supplied and may be placed on the remaining pegs around the periphery of the plastic moulding as required.

BRIMAR

The facilities and organisation provided by Thorn Brimar Limited meet the requirements of the M.O.D. (P.E.) Defence Standard 05-21 and BS9000.

HEALTH AND SAFETY AT WORK ACT, 1974
Attention is drawn to the recommendations under this heading in the Operational Recommendations.

## WARNING

These tubes should be used in accordance with their published ratings, and in conformity with the Operational Recommendations of the Company's data handbook. The Company will not entertain claims for loss or damage where this advice has been disregarded.

## Oscilloscope Tube

## RASTER DISTORTION AND ALIGNMENT

The following data applies for the typical operation conditions.
The undeflected spot will fall in a square $10 \mathrm{~mm} \times 10 \mathrm{~mm}$ about the centre of the tube face.
Raster distortion: The edges of a test raster will fall between two concentric rectangles $6.0 \mathrm{~cm} \times 5.0 \mathrm{~cm}$ and $5.8 \mathrm{~cm} \times 4.8 \mathrm{~cm}$.

Orthogonality of x and y axes is $90^{\circ} \pm 1^{\circ}$.
The horizontal trace will be parallel with the axis of the rectangular face-plate to within $\pm 5^{\circ}$. A twist coil will be required to effect accurate alignment. This should be mounted inside the magnetic shield approximately 90 mm from the face and should not extend more than 100 mm from the face.

The sensitivity (for both $x$ and $y$ plates) at $75 \%$ deflection of the useful scan will not differ by more than $2 \%$ from the sensitivity over $25 \%$ deflection.

It is preferable that the mean $x$ and $y$ plate potentials are equal otherwise some deterioration in performance will occur. Under no circumstances should the mean y plate potential differ from the mean $x$ plate potential by more than 50 V .

## MAGNETIC SHIELDING

Adequate magnetic shielding is required. In addition due attention should be paid to the position of the tube relative to transformers and chokes.

TUBE WEIGHT (approximate) - 430 g .

## MOUNTING POSITION unrestricted

It is advisable to support the tube near the screen, and at a second point on the parallel neck near the base. The tube should not be subjected to any stress from the use of clamps and should not be suspended by the base. Connecting leads should not be soldered directly to the tube pins.

Tolerance on base pin 1 position with respect to tube $y$ axis $\pm 5^{\circ}$.
Page 4, Issue 1.

## Tube Coil TW 60

BOBBIN
Nylon or suitable approved material.

## SHIELD

This twist coil is designed to be used in conjunction with a magnetic shield.

## WINDING

1400 turns of 0.112 mm Lewmex Grade 1 or 2 wire, or approved alternative.
Start and finish of winding to be brought out on 400 mm long $7 \times 0.2 \mathrm{~mm}$ leads with PVC Type 2 Insulation in Different Colours. Cover with Adhesive Tape.

## ELECTRICAL CHARACTERISTICS

Resistance approx. $390 \Omega$. Twist coefficient approximately $3 \mathrm{~mA} /$ degree measured on Typical D9-120.. with Va1 $+\mathrm{a} 3=2 \mathrm{kV}$.

## FITTING

The completed twist coil should be pushed onto the tube and secured to tube by the tabs with suitable adhesive tape.

MANDREL FOR TWIST COIL TW56

All dimensions in mm
Not to be scaled
MANDREL
Shaped from wood in the form of a truncated circular cone, dimensions as above.

## SHIE LD

This twist coil is designed to be used in conjunction with magnetic shield MS89 for D10-310..

## WINDING

900 turns of 0.125 mm Lewmex Grade 1 or 2 wire, or approved alternative, layer wound on the adhesive side of adhesive backed crepe paper to give 5 mm margins between the coil and each edge of the mandrel.
Start and finish of winding to be brought out on 450 mm long thin flexible lead wires from smaller end of winding.
Varnish, if necessary, cover with adhesive backed crepe paper and ensure that the edges of the coil are sealed in place.

## ELECTRICAL CHARACTERISTICS

Resistance $260 \Omega \pm 10 \%$. Twist coefficient approximately $8 \mathrm{~mA} /$ degree measured on typical $\mathrm{D} 10-310$. . with Va4 $=10 \mathrm{kV}$ and $\mathrm{Va} 1=1 \mathrm{kV}$.

## FITTING

The completed twist coil should be pushed hard onto the tube with the lead-out wires in the middle of the short side of the tube on the same side as the cavity cap and sealed to the tube with suitable adhesive tape.

## Oscilloscope Tube

GENERAL
This $10 \mathrm{~cm} \times 8 \mathrm{~cm}$ rectangular tube with electrostatic focusing and deflection has an aluminised screen, and is designed for medium bandwidth applications. It incorporates a means of beam blanking at anode potential which avoids d.c. coupling to the grid.

## RASTER DISTORTION AND ALIGNMENT

The following data applies for the typical operation conditions.
The undeflected spot will fall in a circle of 8 mm radius about the centre of the tube face. The edges of a test raster will fall between two concentric rectangles 10 cm x 8 cm and $9.8 \mathrm{~cm} \times 7.8 \mathrm{~cm}$.

Rectangularity of x and y axes is $90^{\circ} \pm 1^{\circ}$. The horizontal trace will be parallel with the axis of the rectangular face-plate to within $\pm 5^{\circ}$. A twist coil will be required to effect accurate alignment. This should be mounted inside the magnetic shield approximately 90 mm from the face and should not extend more than 195 mm from the face. The ampere turns required will be equal to $12 \sqrt{\mathrm{~V}_{\mathrm{a} 4}}$ (where $\mathrm{V}_{\mathrm{a} 4}$ is quoted in kV ), with provision for reversing the current if necessary.

It is preferable that the mean x and y plate potentials are equal otherwise some deterioration in performance will occur. Under no circumstances should the mean y plate potential differ from the mean x plate by more than 50 V when the tube is operated at 6 kV .

## MAGNETIC SHIELDING

Adequate magnetic shielding is required. In addition due attention should be paid to the position of the tube relative to transformers and chokes.

TUBE WEIGHT (approximate) 1.1 kg

MOUNTING POSITION - unrestricted.

Characteristic curves as D14-181..
Magnetic Shield and Twist Coil as D14-181. .

§ The required voltage will not differ from the quoted value by more than +115 V .

Page 2, Issue 3.

## RASTER DISTORTION AND ALIGNMENT

The undeflected spot will fall in a rectangle $10 \mathrm{~mm} \times 14 \mathrm{~mm}$ about the centre of the tube face. This 10 mm dimension is in the x direction.

Raster distortion: the edges of a test raster will fall between two concentric rectangles $8.5 \mathrm{~cm} \times 7.0 \mathrm{~cm}$ and $8.2 \mathrm{~cm} \times 6.7 \mathrm{~cm}$.

Orthogonality of $x$ and $y$ axes is $90^{\circ} \pm 1^{\circ}$.
The horizontal trace will be parallel with the axis of the rectangular face-plate to within $\pm 5^{\circ}$ 。

A twist coil will be required to effect accurate alignment. This should be mounted between 85 mm and 125 mm from the face. The ampere turns required will be equal to $17.5 \sqrt{\mathrm{Val}_{\mathrm{al}}, \mathrm{a} 3}$ (where $\mathrm{V}_{\mathrm{al}}, \mathrm{a} 3$ is quoted in kV ) with provision for reversing the current.

The sensitivity (for both x and y plates) at $75 \%$ deflection of the useful scan will not differ by more than $3 \%$ from the sensitivity over $25 \%$ deflection

It is preferable that the mean $x$ and $y$ plate potentials are equal otherwise some deterioration in performance will occur. The mean y plate potential should never differ from the mean $x$ plate potential by more than 50 V .

## MAGNETIC SHIELDING

Adequate magnetic shielding is required. In addition due attention should be paid to the position of the tube relative to transformers and chokes.

TUBE WEIGHT - (approximate) 800 g

MOUNTING POSITION - unrestricted.

It is advisable to support the tube near the screen and at a second point on the parallel neck near the base. The tube should not be subjected to any stress from the use of clamps and should not be suspended by the base.
Tolerance on base pin 1 position with respect to tube y axis $\pm 5^{\circ}$

Start and finish of winding to be brought out on 450 mm long thin flexible lead wires at position A on drawing.
Varnish, if necessary, cover with adhesive backed crepe paper and ensure that the edges of the coil are sealed in place.

## ELECTRICAL CHARACTERISTICS

Resistance approx. $1060 \Omega$. Current required for $\pm 5^{\circ}$ twist is $\pm 10 \mathrm{~mA}$ measured on typical D14-350.. with Va4 $=3 \mathrm{kV}$ and $\mathrm{Va} 1=1.0 \mathrm{kV}$.

## FITTING

The completed twist coil should be pushed onto the tube from the base end as far as it will travel and locked in position with adhesive tape.

## GENERAL

This square faced tube with $10 \mathrm{~cm} \times 10 \mathrm{~cm}$ display area has an aluminised screen, spiral p.d.a., electrostatic focusing and deflection. The tube is designed for medium bandwidth applications and is capable of being deflected by transistor circuits.

[^9]
## RASTER DISTORTION AND ALIGNMENT

The following data applies for the typical operation conditions.
The undeflected spot will fall in a circle of 6 mm radius about the centre of the tube face.

Raster distortion: the edges of a test raster will fall between two concentric squares $10 \mathrm{~cm} \times 10 \mathrm{~cm}$ and $9.7 \mathrm{~cm} \times 9.7 \mathrm{~cm}$.

Orthogonality of $x$ and $y$ axes is $90^{\circ} \pm 1^{\circ}$ 。
The horizontal trace will be parallel with the axis of the rectangular face-plate to within $\pm 5^{\circ}$. A twist coil will be required to effect accurate alignment. This should be mounted inside the magnetic shield approximately 160 mm from the face and should not extend more than 215 mm from the face. The ampere turns required will be equal to $13 \sqrt{\mathrm{~V}_{\mathrm{a} 4}}$ (where $\mathrm{V}_{\mathrm{a} 4}$ is quoted in kV ) with provision for reversing the current. The sensitivity (for both $x$ and $y$ plates) at $75 \%$ deflection of the useful scan will not differ by more than $2 \%$ from the sensitivity over $10 \%$ deflection.

It is not advisable that the deflector plates be run asymmetrically, or severe raster distortion may result and the focus quality cannot be guaranteed. It is preferable that the tube be operated with mean $x$ and $y$ potentials equal, otherwise the raster distortion and focus quality will suffer and the limits for $\mathrm{V}_{\mathrm{a} 3}$ and $\mathrm{V}_{\mathrm{S}}$ will differ from specification.

It is recommended that the maximum p.d.a. ratio is not exceeded as this may reduce scan area.

## MAGNETIC SHIELDING

Adequate magnetic shielding is required. In addition due attention should be paid to the position of the tube relative to transformers and chokes.

TUBE WEIGHT (approximate) 1.2 kg.

## MOUNTING POSITION - unrestricted

It is advisable to support the tube near the screen and at a second point on the parallel neck near the base. The tube should not be subjected to any stress from the use of clamps and should not be suspended by the base.

## Oscilloscope Tube

* CT8 symmetrical tolorance

Thorn Brimar Limited

BRIMAR

## Tube Coil TW 45

D16-111..

SHIELD
This twist coil is designed to be used in conjunction with Magnetic Shield MS63 for D16-111..

WINDING
1500 turns of 0.140 mm Lewmex Grade 1 or 2 wire, or approved alternative, layer wound on the adhesive side of adhesive backed crepe paper to give 5 mm margins between the coil and each edge of the mandrel.
Start and finish of winding to be brought out on 450 mm long thin flexible lead wires from smaller end of winding.
Varnish, if necessary, cover with adhesive backed crepe paper and ensure that the edges of the coil are sealed in place.

## ELECTRICAL CHARACTERISTICS

Resistance approx. $590 \Omega$. Twist coefficient approx. $4.0 \mathrm{~mA} /$ degree measured on a typical D16-111.. with $\mathrm{V}_{\mathrm{a} 1}=1.5 \mathrm{kV}$ and $\mathrm{V}_{\mathrm{a} 4-\mathrm{k}}=6.0 \mathrm{kV}$.

## FITTING

The completed twist coil should be pushed hard on to the tube and secured in two places with suitable adhesive tape.

| Line width at $50 \mu \mathrm{~A}$ beam current microscope measurement |  | 0.5 to 0.7 | mm |
| LC screen persistence to 10\% (approximate) |  | 25 | S |

The LC screen is liable to burn even at low value of beam current if operated with stationary or slow moving spot.

It this tube is operated at voltages in excess of 16 kV , x -ray radiation shielding may be necessary to avoid possible danger of personal injury from prolonged exposure at close range. The normal glass protective viewing window may provide such a safeguard. If the radiation measured in contact with this window does not exceed 0.5 millirontgens per hour, the window will normally provide adequate protection.

TUBE WEIGHT (approximate) - 11 kg
MOUNTING POSITION - unrestricted

## MOUNTING

There is an annular region of anti-corona coating surrounding the CT8 cap, the tube should not be handled in this region.

The tube can be mounted in any position. The tube socket should not be rigidly mounted but should have flexible leads and be allowed to move freely.

The external conductive coating M1 and metal M2 of this tube form, with the final anode, capacitances which may be used to provide smoothing for the e.h.t. supply.

Flashover protection should be incorporated. M1 and M2 should be connected together and returned to chassis via paths appropriate to the protection system employed.

General principles are described in Investigation Report L137.

Characteristic curves as M14-100. .

* Determined by reference line gauge No. 21 .

Page 2, Issue 3.

## NOTES

1. The major axis of each lug hole lies at an angle of $2.4^{\circ}$ to the major axis of the tube face.
2. The bolts used for mounting the tube must lie within circles of 4.0 mm diameter centred on the true position.
3. The mid-point between the hole centres of each pair of lugs on the shorter sides of the tube face will not deviate from the major axis of the face by more than 2.5 mm .
4. One of the four lugs may deviate 2.0 mm maximum from the plane through the
 other three lugs.

Page 3, Issue 1.

## MOUNTING

There is a region of anti-corona coating surrounding the CT8 cap, the tube should not be handled in this region.
The tube can be mounted in any position. The tube socket should not be rigidly mounted but should have flexible leads and be allowed to move freely.

The external conductive coating M1 and metal M2 of this tube form, with the final anode, capacitances which may be used to provide smoothing for the e.h.t. supply.

Flashover protection should be incorporated, M1 and M2 should be connected together and returned to chassis via paths appropriate to the protection system employed.

General principles are described in Investigation Report L137.

Page 2, Issue 1.

## Data Display or Monitor Tube

Note:- Four fixing holes through thickness of frame 4.8 mm diameter, counterbored 7.6 mm diameter 5 mm deep from the front face.

* Determined by reference line gauge No. 21.

## GENERAL

The M23-114. . is the M23-112. . having a laminated face-plate with green filter giving a total face-plate transmission at the centre of approximately $32 \%$. The external surface is treated to reduce specular reflection.

| Heater voltage | $\mathrm{V}_{\mathrm{h}}$ | 11 | V |
| :--- | :--- | :--- | ---: |
| Heater current | $\mathrm{I}_{\mathrm{h}}$ | 75 | mA |

## PHOSPHOR SCREEN

This type is usually supplied with GH phosphor (M23-114GH) giving a green trace of medium short persistence. Other phosphor screens can be made available to special order.

TUBE WEIGHT (approximately) - net 1.8 kg .

DIMENSIONS See following pages.

OTHER DETAILS
For all other information refer to the data for type M23-112..

## All dimensions in mm

Not to be scaled

* The bolts to be used for mounting the tube must lie within circles of 4.0 mm diameter centred on these true positions. One of the four lugs may deviate 2.0 mm maximum from the plane through the other three lugs.
$\dagger$ Determined by reference line gauge No. 21.

Page 2, Issue 2.

## PRELIMINARY DATA

## GENERAL

Rectangular face, $23 \mathrm{~cm}, 90^{\circ}$ diagonal
Implosion protected. Integral mounting lugs Laminated face-plate with green filter Surface treated to reduce specular reflections Electrostatic focus, magnetic deflection
Aluminised screen
29.4 mm maximum neck diameter External conductive coating

| Heater voltage | $\mathrm{V}_{\mathrm{h}}$ | 6.3 | V |
| :--- | :--- | :--- | :--- |
| Heater current | $\mathrm{I}_{\mathrm{h}}$ | 0.3 | A |

ABSOLUTE RATINGS - Voltages referred to cathode
Maximum second and fourth anode voltage
Minimum second and fourth anode voltage
Maximum third anode voltage range
Maximum first anode voltage
Minimum first anode voltage
Maximum negative grid voltage
Minimum negative grid voltage

| $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4(\max )}$ | 18 | kV |
| :--- | ---: | ---: |
| $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4(\min )}$ | 10 | kV |
| $\mathrm{V}_{\mathrm{a} 3(\max )}$ | $\pm 700$ | V |
| $\mathrm{~V}_{\mathrm{a} 1(\max )}$ | 600 | V |
| $\mathrm{~V}_{\mathrm{a} 1(\min )}$ | 200 | V |

|  |  |  |

If this tube is operated at voltages in excess of $16 \mathrm{kV}, \mathrm{x}$-ray radiation shielding may be necessary to avoid possible danger of personal injury from prolonged exposure at close range.

## PHOSPHOR SCREEN

This type is supplied with GH phosphor (M23-130GH) giving a green trace of medium short persistence.

This data should be read in conjunction with Brimar Operational and Safety Recommendations for Industrial Cathode Ray Tubes.

This tube meets the requirements for intrinsically safe tubes laid down in the section of I. E. C. Publication 65 dealing with implosion.

Thorn Brimar Limited

| Heater voltage | $\mathrm{V}_{\mathrm{h}}$ | 6.3 | V |
| :--- | :--- | :--- | :--- |
| Heater current | $\mathrm{I}_{\mathrm{h}}$ | 0.3 | A |

| Maximum third anode voltage | $\mathrm{V}_{\mathrm{a} 3 \text { (max) }}$ | 18* |
| :---: | :---: | :---: |
| Minimum third anode voltage | $\mathrm{V}_{\mathrm{a} 3(\mathrm{~min})}$ | 14 |
| Maximum second anode voltage | $\mathrm{V}_{\mathrm{a} 2 \text { (max) }}$ | 5.0 |
| Maximum first anode voltage | $\mathrm{V}_{\mathrm{a} 1 \text { (max) }}$ | 770 |
| Maximum negative grid voltage | $-\mathrm{V}_{\mathrm{g}(\max )}$ | 155 |
| Minimum negative grid voltage | $-\mathrm{V}_{\mathrm{g}(\mathrm{min})}$ | 1.0 |
| Maximum heater to cathode voltage, heater negative (d.c.) | $\mathrm{V}_{\mathrm{h}-\mathrm{k}(\max )}$ | 250 |
| Maximum peak heater to cathode voltage, heater negative | $\mathrm{v}_{\mathrm{h}-\mathrm{k}(\mathrm{pk}) \text { max }}$ | 400 § |
| Maximum impedance, grid to cathode ( 50 Hz ) | $\mathrm{Z}_{\mathrm{g}-\mathrm{k}(\max )}$ | 0.5 |
| Maximum resistance, grid to cathode | $\mathrm{R}_{\mathrm{g}-\mathrm{k} \text { (max) }}$ | 1.5 |
| Maximum peak cathode current | $\mathrm{i}_{\mathrm{k}(\mathrm{pk}) \mathrm{max}}$ | 0.5 |

* $\mathrm{I}_{\mathrm{a} 3}=0$
§ During a warming-up period not exceeding 45 seconds.
If this tube is operated at voltages in excess of 16 kV , x-ray radiation shielding may be necessary to avoid possible danger of personal injury from prolonged exposure at close range.

## PHOSPHOR SCREEN

This type is usually supplied with a GH phosphor (M31-230GH) giving a green trace of medium short persistence. Other phosphor screens can be made available to special order.
This data should be read in conjunction with Brimar Operational and Safety Recommendations for Industrial Cathode Ray Tubes.

This tube meets the requirements for intrinsically safe tubes laid down in the section of I.E.C. Publication 65 dealing with implosion.

## Data Display or Monitor Tube

## INTER - ELECTRODE CAPACITANCES

| Cathode to all (max) | $\mathrm{c}_{\mathrm{k} \text {-all (max) }}$ | 7.0 | pF |
| :--- | :--- | :--- | :--- |
| Grid to all (max) | $\mathrm{c}_{\mathrm{g} \text {-all (max) }}$ | 10 | pF |
| Anode 3 to coating $\mathrm{M}_{1}$ | $\mathrm{c}_{\mathrm{a3}-\mathrm{M} 1}$ | 700 | pF |
| Anode 3 to shell $\mathrm{M}_{2}$ (Approx.) | $\mathrm{c}_{\mathrm{a} 3-\mathrm{M} 2}$ | 200 | pF |

TYPICAL OPERATION - Grid modulation, voltages referred to cathode.

| Third anode voltage | $\mathrm{V}_{\mathrm{a} 3}$ | 16 | kV |
| :--- | :---: | :---: | ---: |
| First anode voltage <br> Second anode voltage for centre focus(nom) | $\mathrm{V}_{\mathrm{a} 1}$ | $\mathrm{~V}_{\mathrm{a} 2}$ | 450 |
| Grid to cathode voltage for <br> cut-off of raster | $\mathrm{V}_{\mathrm{g}}$ | 4.0 | kV |
| Typical line width at $50 \mu \mathrm{~A}$ beam current shrinking <br> $\quad$ raster measurements at face centre | -35 | to | -85 |

Note: To obtain best overall performance, a dynamic focus voltage variation of approximately 450 V is required between the centre of the screen and any corner.

* In operation the second anode current will vary with beam current. To avoid focus variation the supply impedance should be kept low.

## MOUNTING

There is an annular region of anti-corona coating with external diameter of 75 mm surrounding the CT8 cap, the tube should not be handled in this region.
The tube can be mounted in any position. The tube socket should not be rigidly mounted but should have flexible leads and be allowed to move freely.

The external conductive coating M1 and metal M2 of this tube form, with the final anode, capacitances which may be used to provide smoothing for the e.h.t. supply.
Flashover protection should be incorporated. M1 and M2 should be connected together and returned to chassis via paths appropriate to the protection system employed.
General principles are described in Investigation Report L137.

TUBE WEIGHT (approximate) - net 3.3 kg .

Page 2, Issue 2.

* The bolts to be used for mounting the tube must lie within circles of 7.0 mm diameter centred on these true positions. One of the four lugs may deviate 2.0 mm maximum from the plane through the other three lugs.
$\dagger$ Determined by reference line gauge No. 15.

## PRELIMINARY DATA

## GENERAL

Rectangular face, $31 \mathrm{~cm}, 90^{\circ}$ diagonal Ruggedised construction. Mounting frame. Laminated face-plate giving total glass transmission of $15 \%$ (approx.) and surface treated to reduce specular reflection Electrostatic focus, magnetic deflection 29.4 mm maximum neck diameter Flying lead connections for base and anode External conductive coating

| Heater voltage | $\mathrm{V}_{\mathrm{h}}$ | 11.5 | V |
| :--- | :--- | :--- | :--- |
| Heater current | $\mathrm{I}_{\mathrm{h}}$ | 0.15 | A |

| ABSOLUTE RATINGS |  |  |  |
| :---: | :---: | :---: | :---: |
| Maximum second and fourth anode voltage | $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4 \text { (max) }}$ | 18 | kV |
| Minimum second and fourth anode voltage | $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4}(\mathrm{~min})$ | 10 | kV |
| Maximum third anode voltage range | $\mathrm{V}_{\mathrm{a} 3 \text { (max) }}$ | $\pm 700$ | V |
| Maximum first anode voltage | $\mathrm{V}_{\mathrm{al}}$ (max) | 600 | V |
| Minimum first anode voltage | V a1 (min) | 200 | V |
| Maximum negative grid voltage | $-\mathrm{V}_{\mathrm{g}(\max )}$ | 200 | V |
| Minimum negative grid voltage | $-\mathrm{V}_{\mathrm{g}(\min )}$ | 1.0 | V |
| Maximum heater to cathode voltage, heater negative (d.c.) | $\mathrm{V}_{\mathrm{h}-\mathrm{k}(\max )}$ | 200 | V |
| Maximum peak heater to cathode voltage heater negative | $\mathrm{v}_{\mathrm{h}-\mathrm{k}(\mathrm{pk})_{\text {max }}}$ | 250 | V |
| Maximum impedance, grid to cathode ( 50 Hz ) | $\mathrm{Z}_{\mathrm{g}-\mathrm{k}}(\max )$ | 0.5 | $\mathrm{M} \Omega$ |
| Maximum resistance, grid to cathode | $\mathrm{R}_{\mathrm{g}-\mathrm{k}}$ (max) | 1.5 | $\mathrm{M} \Omega$ |

If this tube is operated at voltages in excess of 16 kV , x -ray radiation shielding may be necessary to avoid possible danger of personal injury from prolonged exposure at close range.

## PHOSPHOR SCREEN

This type is usually supplied with GH phosphor (M31-260GH) giving a green trace of medium short persistence. Other phosphor screens can be made available to special order.

This tube meets the requirements for intrinsically safe tubes laid down in the section of I. E. C. Publication 65 dealing with implosion.

This data should be read in conjunction with Brimar Operational and Safety Recommendations for Industrial Cathode Ray Tubes.

| INTER-ELECTRODE CAPACITANCES |  | * | $\dagger$ |  |
| :---: | :---: | :---: | :---: | :---: |
| Cathode to all | $c_{k-a l l}$ | 3.0 | 3.5 | pF |
| Grid to all | $\mathrm{c}_{\mathrm{g} \text {-all }}$ | 6.5 | 7.5 | pF |
| Anodes 2 and 4 to coating $\mathrm{M}_{1}$ (approx.) | $\mathrm{c}_{\mathrm{a} 2+\mathrm{a} 4-\mathrm{M} 1}$ | 750 |  | pF |
| Anodes 2 and 4 to metal $\mathrm{M}_{2}$ (approx.) | $\mathrm{c}_{\mathrm{a} 2+\mathrm{a} 4-\mathrm{M} 2}$ | 200 |  | pF |
| * Holder capacitance balanced out. |  |  |  |  |

| Second and fourth anode voltage | $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4}$ | 12 to 16 | kV |
| :---: | :---: | :---: | :---: |
| First anode voltage | $\mathrm{V}_{\text {a1 }}$ | 400 | V |
| Third anode voltage range for focus | $\mathrm{V}_{\text {a3 }}$ | 0 to 400 § | V |
| Grid to cathode voltage for cut-off of raster | $\mathrm{V}_{\mathbf{g}}$ | -38 to -82 | V |
| Typical line width at $50 \mu \mathrm{~A}$ (Shrinking raster) |  | 0.37 | mm |

§ The change of spot size with variation of focus voltage is small and the limit of 0 to 400 V is such that an acceptable focus quality is obtained within this range. If it is required to pass through the point of focus a voltage range of at least -100 V to +500 V will be required.

## MOUNTING

If a mask is used with this tube it should be flexible enough to take up small variations in fixing and bulb contours.

There is a region of anti-corona coating surrounding the CT8 cap, the tube should not be handled in this region.

The tube can be mounted in any position.
The external conductive coating M1 and metal M2 of this tube form, with the final anode, capacitances which may be used to provide smoothing for the e.h.t. supply.

Flashover protection should be incorporated. M1 and M2 should be connected together and returned to chassis via paths appropriate to the protection system employed.

General principles are described in Investigation Report L137.

TUBE WEIGHT (approximate) 3.5 kg .

## GENERAL

Rectangular tube with 2:1 display aspect ratio 36 cm diagonal. Implosion protection *. Laminated grey glass face-plate $33 \%$ transmission (approx.)
Surface treated to reduce specular reflection Integral mounting lugs.
Electrostatic focus, magnetic deflection 29.4 mm maximum neck diameter Aluminised screen

| Heater voltage | $\mathrm{V}_{\mathrm{h}}$ | 6.3 | V |
| :--- | :--- | :--- | :--- |
| Heater current | $\mathrm{I}_{\mathrm{h}}$ | 0.3 | A |

## ABSOLUTE RATINGS - Voltages referred to cathode

Maximum second and fourth anode voltage
Minimum second and fourth anode voltage
Maximum third anode voltage range
Maximum first anode voltage
Minimum first anode voltage
Maximum negative grid voltage
Minimum negative grid voltage
Maximum heater to cathode voltage, heater negative (d.c.)

| $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4(\max )}$ | 20 | kV |
| :---: | :---: | ---: |
| $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4(\min )}$ | 10 | kV |
| $\mathrm{V}_{\mathrm{a} 3(\max )}$ | $\pm 700$ | V |
| $\mathrm{~V}_{\mathrm{a} 1(\max )}$ | 600 | V |
| $\mathrm{~V}_{\mathrm{a} 1(\min )}$ | 200 | V |
| $-\mathrm{V}_{\mathrm{g}(\max )}$ | 200 | V |
| $-\mathrm{V}_{\mathrm{g}(\min )}$ | 1.0 | V |
| $\mathrm{~V}_{\mathrm{h}-\mathrm{k}(\max )}$ | 200 | V |
| $\mathrm{v}_{\mathrm{h}-\mathrm{k}(\mathrm{pk}) \max }$ | 250 | V |
| $\mathrm{Z}_{\mathrm{g}-\mathrm{k}(\max )}$ | 0.5 | $\mathrm{M} \Omega$ |
| $\mathrm{R}_{\mathrm{g}-\mathrm{k}(\max )}$ | 1.5 | $\mathrm{M} \Omega$ |

## PHOSPHOR SCREEN

This type is usually supplied with GH phosphor (M36-190 GH) giving a green trace of medium short persistence. Other phosphor screens can be made available to special order.

* This tube meets the requirements for intrinsically safe tubes laid down in the section of I.E.C. Publication 65 dealing with implosion.

This data should be read in conjunction with Brimar Operational and Safety Recommendations for Industrial Cathode Ray Tubes.

Thorn Brimar Limited
Page 1, Issue 1.

## INTER - ELECTRODE CAPACITANCES

| Cathode to all | $c_{\text {k-all }}$ | pF |
| :--- | :--- | :--- |
| Grid to all | $\mathrm{c}_{\mathrm{g} \text {-all }}$ | pF |

TYPICAL OPERATION - Grid modulation, voltages referred to cathode

| Second and fourth anode voltage | $\mathrm{V}_{\mathrm{a} 2+\mathrm{a} 4}$ | 16 | kV |
| :--- | :--- | :--- | ---: |
| First anode voltage | $\mathrm{V}_{\mathrm{a} 1}$ | 400 | V |
| Third anode voltage range for focus | $\mathrm{V}_{\mathrm{a} 3}$ | 0 to $400 \S$ | V |
| Grid to cathode voltage for <br> cut-off of raster | $\mathrm{V}_{\mathrm{g}}$ | -38 to -82 | V |

§ The change of spot size with variation of focus voltage is small and the limit of
0 to 400 V is such that an acceptable focus quality is obtained within this range. If it is
required to pass through the point of focus a voltage range of at least -100 V to +500 V
will be required.

## MOUNTING

If a mask is used with this tube it should be flexible enough to take up small variations in fixing and bulb contours.

There is a region of anti-corona coating surrounding the CT8 cap, the tube should not be handled in this region.

The tube can be mounted in any position. The tube socket should not be rigidly mounted but should have flexible leads and be allowed to move freely.

The bolts for mounting the tube must lie within circles of 3.5 mm diameter centred on the true positions. One of the four lugs may deviate 2 mm maximum from the plane through the other three lugs.

The external conductive coating M1 and metal M2 of this tube form, with the final anode, capacitances which may be used to provide smoothing for the e.h.t. supply.

Flashover protection should be incorporated. M1 and M2 should be connected together and returned to chassis via paths appropriate to the protection system employed.

General principles are described in Investigation Report L137.

| Heater voltage |
| Heater current | $\mathrm{V}_{\mathrm{h}}$

## PHOSPHOR SCREEN

This type is usually supplied with W phosphor (M38-107W) giving a television white trace of medium short persistence. Other phosphor screens can be made available to special order.

TUBE WEIGHT (approximately) net 6.0 kg .

DIMENSIONS See following page.

## OTHER DETAILS

For all other information refer to the data for type M38-100. .

## Data Display or Monitor Tube

* The bolts to be used for mounting the tube must lie within the circles of 6.5 mm diameter centred on these true positions. One of the four lugs may deviate 2 mm maximum from the plane through the other three lugs.
$\dagger$ Determined by reference line gauge No. 15.
§ Total thickness of frame tension band and clip 8 mm maximum. The clip will not project in front of the frame dimension.

## PHOSPHOR SCREEN

This type is usually supplied with GH phosphor (M38-124GH) giving a green trace of medium short persistence. Other phosphor screens can be made available to special order.

TUBE WEIGHT (approximately) 5.5 kg .

DIMENSIONS See following page.

## OTHER DETAILS

For all other information refer to the data for type M38-120. .

* The bolts to be used for mounting the tube must lie within the circles of 7.5 mm diameter centred on these true positions. One of the four lugs may deviate 2 mm maximum from the plane through the other three lugs.
$\dagger$ Determined by reference line gauge No. 16 (B.S. RL4 : IEC 67-IV-3 : JEDEC 126). See TDS No. 91-16.
Minimum useful screen area $646 \mathrm{~cm}^{2}$.

Page 2, Issue 1.

## ABRIDGED SPECIFICATION

GENERAL
Ruggedised CRT with coils enclosed by resin filled magnetic shield.
Bonded mounting frame.
Rectangular face-plate, $85 \mathrm{~mm} \times 113 \mathrm{~mm} \mathrm{~min}$. screen area. Magnetic deflection $70^{\circ}$ diagonal. Laminated panel providing implosion protection, contrast enhancement filter matched to GY phosphor and with anti-reflection coating.
