ONDERWERP : Release for transferred production in Brive of C.R.T. types D14-160GH/09 and 95447.

The C.R.T. types D14-160GH/09 and 95447 made in Brive are tested in Eindhoven on several parameters according to the F and L and lifetest specifications to obtain :

"Release for transferred production" in Brive.

Annexed reports give summaries of test - and measuring results of the above mentioned tube types.

As can be seen the results summarised on sheet 2, 3 and 4 these types can be given.

"Release for transferred production" in Brive.

Summary of test results

- 1) See reports RAR-84/75.171 test results batch 1  
75.222 test results batches 2 and 3  
75.240 test results batch 4  
76.022 test results batch 5  
RAR-84/75.229 L test and life test results batch 1  
/76.012 L test and life test results batch 2

2) Summary of test II results

Received 5 batches (135 pieces)

Good 78 pieces

2 pieces stray emission (repaired)

7 pieces dirt on the mesh (repaired)

4 pieces modulation too high (repaired)

33 pieces silicat stains (repaired)

Good after repair 124 pieces

Rejected 3 pieces usefull scan too small

1 piece eccentricity

1 piece grey dot

1 piece black dot

1 piece  $\nabla Vg1$  too high

1 piece rasterdistortion

1 piece bruise

2 pieces cracked near screen

3) Summary of L test results

Batch 1 : All faults have already been mentioned in test

II results RAR-84/75.171

The results are satisfactory

ONDERWERP :

4) Summary of lifetest results

Batch 1	<u>0 hours</u>	No remarks
	<u>1000 hours</u>	The results are <b>satisfactory</b>
Batch 2	<u>0 hours</u>	2 tubes with modulation too high good after 160 hours.
	<u>1000 hours</u>	1 tube modulation rather high 37 V (was bad on 0 hour)

The remaining electrical measurements are good.

5) Conclusion

From the results we conclude that there is no objection against release of the C.R.T.'s D14-160..., 95447 for production and measuring in Brive. .

Test II results

Received 25 tubes

Measured 5 tubes (First sample test)

Good 1 tube

Rejected 4 tubes 1x dirt on the mesh and silicat stains  
2x silicat stains  
1x dirt on the mesh, silicat stains  
useful scan Y too small, eccentricity  
Y too big.

Batch is rejected.

Measured 20 tubes (second test) total lot

Total results of all tubes:

Good 2 tubes

Rejected and repaired: 1x dirt on the mesh and silicat stains  
515379  
7x silicat stains 525090- 515382 - 525077  
- 530055- 530046 - 530052- 530015  
1x bruise + silicat stains + modulation  
too big 525062  
1x silicat stains + bruise + dirt on the  
mesh 530022  
1x silicat stains + scratches 530043  
1x scratches + dirt on the mesh 53038  
1x bruise 530034  
1x bruise and silicat stains 530073  
1x modulation too big and silicat stains  
524139  
1x dirt on the mesh 525070  
1x scratches 525063

Rejected not repaired: 1x Eccentricity Y too big, useful scan  
too small, dirt on the mesh and silicat  
stains 515378  
1x Eccentricity Y too big 515387  
1x Useful scan too small 525052  
1x Useful scan too small and silicat  
stains 515575  
1x Grey dot 1.5 mm and silicat stains 530030  
1x Black dots 0.5-0.4 mm and scratches  
515413

Good after repair 19 tubes

for L-test: 515378 - 515387 - 525052 - 530030 - 515413

L-test and life test results

L-test results

- a) 1 tube bad on emission.  
due to bad emission not measured on line width.
- b) 3 tubes brightness is rather low.  
There is a great variation in thickness of the  
metalbacking (see DHS = dark hart tension)
- c) 1 tube scratches over the face plate.

The other electrical and mechanical measurements are good.

Life test results

0 hours : 2 tubes with modulation too high  
good after 160 hours.

1000 hours: 1 tube modulation rather high 37 V  
(was bad on 0 hours)

The other electrical and mechanical measurements are  
good.

Conclusion : The general impression is good.
