**HEATING:** direct by A.C. or D.C.; filament thoriated tungsten

Filament voltage                                    V<sub>f</sub> = 12.6 V

Filament current                                    I<sub>f</sub> = 160 A

### CAPACITANCES

Grid to filament                                    C<sub>gf</sub> = 120 pF

Anode to filament                                    C<sub>af</sub> = 1.4 pF

Anode to grid                                        C<sub>ag</sub> = 50 pF

### TYPICAL CHARACTERISTICS

Anode voltage                                        V<sub>a</sub> = 3 kV

Anode current                                        I<sub>a</sub> = 1 A

Amplification factor                                 $\mu$  = 58

Mutual conductance                                S = 60 mA/V

### TEMPERATURE LIMITS (Absolute limits)

Bulb temperature                                    t = max. 220 °C

Seal temperature                                    t = max. 220 °C

### COOLING

For cooling data see cooling curves. These curves are for an air inlet temperature of 25 °C.

At lower temperatures the amount of air should be the same.

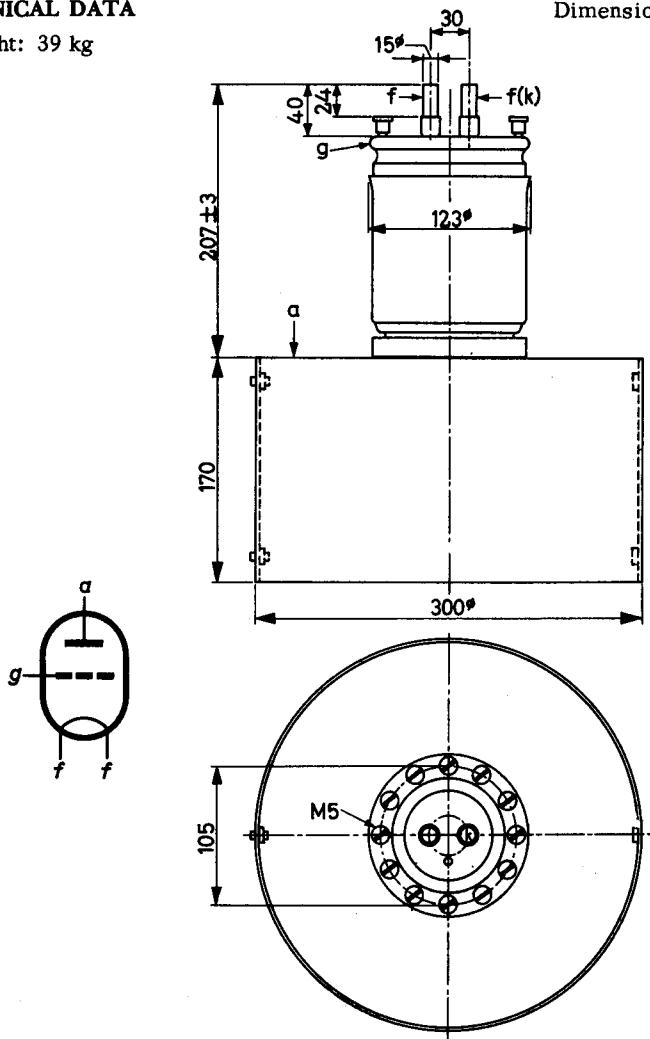

At higher temperatures the amount of air should be increased so that the outlet air temperature is not higher than at  $t_i = 25$  °C.

At frequencies higher than 10 MHz a low velocity air flow should be directed to the grid and filament seals.

**MECHANICAL DATA**

Net weight: 39 kg

Dimensions in mm

**ACCESSORIES**

|                     |       |
|---------------------|-------|
| Insulating pedestal | 40672 |
| Filament connector  | 40670 |
| Grid connector      | 40671 |

Mounting position: vertical  
with anode down

**R.F. CLASS C TELEGRAPHY or F.M. TELEPHONY****LIMITING VALUES (Absolute limits)**

| Frequency             | f      | up to | 10   | up to | 30   | MHz     |
|-----------------------|--------|-------|------|-------|------|---------|
| Anode voltage         | $V_a$  | =     | max. | 16    | max. | 12.5 kV |
| Anode dissipation     | $W_a$  | =     | max. | 35    | max. | 35 kW   |
