

WATER COOLED R.F. POWER TRIODE

QUICK REFERENCE DATA								
Freq. (MHz)	C telegr.		C an. mod.		C industr. osc.		B mod ¹⁾	
	V _a (kV)	W _o (kW)						
30	12	108	10	83	12	124	10	106
	10	75	10	58	12	108	10	64
					10	75		

HEATING: direct; filament thoriated tungsten

Filament voltage	V _f	=	17.5	V
Filament current	I _f	=	196	A
Filament peak current	I _{fp}	max.	420	A
Cold filament resistance	R _{fo}	=	0.012	Ω

CAPACITANCES

Anode to all other elements except grid	C _a	=	2.2	pF
Grid to all other elements except anode	C _g	=	122	pF
Anode to grid	C _{ag}	=	75	pF

TYPICAL CHARACTERISTICS

Anode voltage	V _a	=	3	10	kV
Anode current	I _a	=	50	5	A
Amplification factor	μ	=	25	25	
Mutual conductance	S	=	140	60	mA/V

¹⁾ Two tubes

TEMPERATURE LIMITS (Absolute limits)

Water inlet temperature $t_i = \text{max. } 50^{\circ}\text{C}$
Temperature of seals $= \text{max. } 180^{\circ}\text{C}$

WATER COOLING CHARACTERISTICS ; see also cooling curves

W_a (kW)	t_i ($^{\circ}\text{C}$)	q_{\min} (l/min)	p_i (atm)
30	20	25	0.15
	50	45	0.45
50	20	32	0.25
	50	65	0.85
100	20	55	0.6
	50	120	3.0

At water inlet temperatures between 20 and 50 $^{\circ}\text{C}$ the required quantity of water can be found by linear interpolation.

At frequencies below 6 MHz forced air cooling of the seals will, as a rule, not be necessary. Above 6 MHz air cooling must be used to keep the anode and grid seal temperatures below 180 $^{\circ}\text{C}$. The seals can be cooled by connecting a blower of suitable size to the air inlet of the anti-corona ring, attached to the tube.

At maximum frequency (30 MHz) and published operating conditions an air flow of 2.5 m³/minute with a pressure loss of about 500 mm H₂O will in general be sufficient. The air flow must be started upon or before the application of filament voltage.

When using the special filament connectors type No. 40628, together with connecting leads of adequate cross-section, additional air cooling of the filament terminals is, as a rule, not necessary.

Care should be taken to ensure firm contact of the filament terminals in order to obtain equal distribution of current over these terminals.

MECHANICAL DATA

Water-jacket : K714

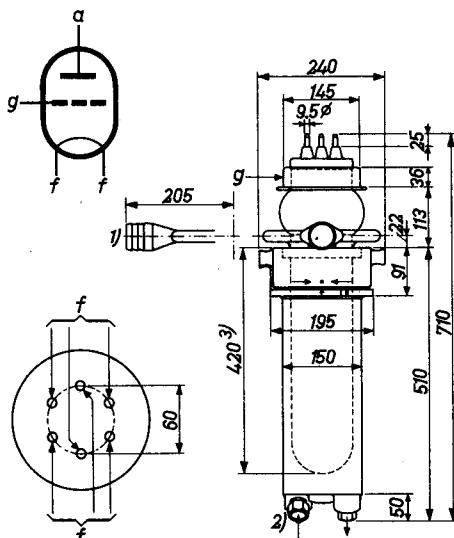

Filament connectors: 40628

O-ring : 2622 080 30916

Dimensions in mm

Net weight of tube : 14 kg

Net weight of water-jacket: 20.5 kg

Mounting position: vertical with anode down

When connecting the filament the three pins of each group must be joined.

1) Use connecting hose with an inner diameter of 1 $\frac{3}{4}$ ".

2) Coupling for metal tubing with an outer diameter of 28 mm.

3) For removing the tube from its water-jacket the free height above the tube must be at least 420 mm.

R.F. CLASS C TELEGRAPHY**LIMITING VALUES (Absolute limits)**

Frequency	f	up to	4	15	30	MHz
Anode voltage	V_a	= max.	15	13.5	12.5	kV
