Beam Power Tube

HIGH POWER SENSITIVITY
RCA "DARK HEATER" WITH 21- TO 31-VOLT RANGE

85 WATTS CW INPUT (ICAS) 50 WATTS CW INPUT (ICAS)
UP TO 60 Mc AT 175 Mc
CONTROLLED ZERO-BIAS CONTROLLED POWER OUTPUT
PLATE CURRENT AT REDUCED HEATER VOLTAGE

For RF Power Amplifier and Oscillator Service and as an
AF Power Amplifier and Modulator in Both Mobile and
Fixed Equipment. The 6159B is Unilaterally Inter-
changeable with Types 6159, 6159A.

The 6159B is the same as the 6146B/8298A except for the
following items:

Electrical:
Heater, for Unipotential Cathode:
  Voltage (AC or DC) . . . . . . . . . . 26.5 volts
  Current at heater volts = 26.5 . . . . 0.3 amp
  Minimum heating time . . . . . . . . 60 sec
Direct Interelectrode Capacitances:
  Grid No.1 to plate . . . . . . . . . . 0.24 max. pf

  a With no external shield.

SPECIAL PERFORMANCE DATA

Stationary Equipment Operation:

Heater, for Unipotential Cathode:
  Voltage (AC or DC)\textsuperscript{v} . . . . - 26.5 - volts
  Current at 26.5 volts . . . . . . . 0.28 - 0.32 amp
  Useful Power Output\textsuperscript{w} . . . . . . . . 59 - - watts

\textsuperscript{v} It is recommended that the design-center heater voltage be 26.5 volts;
the heater power supply should not fluctuate more than 10\% to insure
long life.

\textsuperscript{w} In a single-tube, self-excited oscillator circuit, and with ac heater
voltage of 26.5 volts, dc plate voltage of 600 volts, dc grid-No.2
voltage of 200 volts, grid-No.1 resistor of 24,000±10\% ohms, dc plate
current of 150 max. ma., dc grid-No.1 current of 2.5 to 3 ma., and
frequency of 15 Mc.
Mobile Equipment Operation:

X It is recommended that the heater voltage operate within the range of 24 to 29 volts and within excursions from 21 to 31 volts in battery operation. See Useful Power Output II and Overvoltage Tests.

Y In a single-tube, self-excited oscillator circuit, and with ac heater voltage of 26.5 volts, dc plate voltage of 600 volts, dc grid-No. 2 voltage of 200 volts, grid-No. 1 resistor of 24,000 ± 10% ohms, dc plate current of 150 max. ma., dc grid-No. 1 current of 2.5 to 3 ma., and frequency of 15 Mc.

Z With conditions in note (y) above, reduce heater voltage to 21 volts. Useful power output will be at least 90% of the power output at heater voltage of 26.5 volts.

Overvoltage Heater Life Tests:

Continuous heater life tests are performed periodically on sample lots of tubes with 31 volts on the heater, all other electrodes "floating". Intermittent heater life tests are performed periodically on sample lots of tubes with 43 volts on the heater, a cycle of 1 minute "ON" and 4 minutes "OFF". After 1000 hours of the continuous heater life test and after 48 hours of the intermittent heater life test, the following tests are performed:

With heater voltage of 26.5 volts and ± 100 dc volts between cathode and heater, the heater-cathode leakage current will not exceed 150 microamperes.

With ac or dc heater voltage of 26.5 volts, grid-No. 1 volts = -200 and cathode, grid No. 2, and plate grounded, the minimum grid-No. 1 leakage resistance will be 10 megohms.

With ac or dc heater voltage of 26.5 volts, plate volts = -200, and cathode grid No. 1 and grid No. 2 grounded, the minimum plate leakage will be 10 megohms.
