Litton Planar Triode Types 5767 and 6481 are intended primarily for use in microwave circuits as CW oscillators at frequencies up to 3.3 Gc. These planar-electrode disc-seal triodes may be used as integral parts of a tuned cavity. Their low internal lead inductance make these tubes well adapted to lumped constant circuits. The mechanical configuration was designed for use in butterfly type circuits, since it is easily clamped into the circuit by beryllium straps. The 5767 has a slightly lower anode-to-cathode capacitance which makes it perform well in broadband tunable oscillator circuits.

ABSOLUTE MAXIMUM PARAMETERS
PER PARA. 6.5 MIL-E-1D
Heater Voltage (AC or DC) ......................... 7.0 V
Heater Current .................................. 0.45 A
Anode Voltage .................................. 350 Vdc
Anode Dissipation .............................. 5.0 W
Seal Temperature ............................... 200° C
Operating Frequency ......................... 3.3 Gc

TUBE CHARACTERISTICS (Typical)

Transconductance ......................... 4500 umhos
Amplification Factor ....................... 25
Grid Voltage for Ib = 10 uAde.................. -15 V

Above parameters measured at Ef=6.3 V, Eb=180 V, Rk=400 ohms, and Ib=12.0 mAdc.

OPERATING CHARACTERISTICS (Typical)

(1) UHF Oscillator CW
   Anode Voltage .......................... 200 Vdc
   Anode Current ......................... 35 mAde
   Frequency ............................. 1.0 Gc
   Power Output .......................... 2.0 W
   Heater Voltage ......................... 6.3 Vac

(2) UHF Oscillator CW
   Anode Voltage .......................... 200 Vdc
   Anode Current ......................... 25 mAde
   Frequency ............................. 3.3 Gc
   Power Output .......................... 400 mw
   Heater Voltage ......................... 6.3 Vac

(3) UHF Oscillator CW Tunable
   Anode Voltage .......................... 325 Vdc
   Anode Current ......................... 40 mA
   Frequency ............................. 200-900 Mc
   Power Output .......................... 300 mw
   Heater Voltage ......................... 6.3 Vac

NOTE:
1. In a tunable cavity designed for the indicated frequency ranges.
