Half-Wave  
Gas-Filled Rectifier  

Code: 3B28 (CV1835)  

The 3B28 is a xenon-filled, half-wave rectifier designed for operation in high voltage circuits where extremes of ambient temperature are encountered.

It is well suited for mobile applications since its construction permits the valve to be mounted in any position and heaters, fans and thermostats are not required for the close control of bulb temperature.

CATHODE 
Oxide-coated filament  
Filament voltage  2.5 V  
Nominal current  5.0 A  
Minimum heating time  10 sec  

MECHANICAL DATA 
Maximum overall length  162 mm  
Maximum bulb diameter  52.6 mm  
Base  American medium 4-pin bayonet  
Top cap  CT3 with insulating collar  
Mounting position  Unrestricted  
Net weight  120 g  

MAXIMUM RATINGS 
Maximum peak inverse voltage  5 10 kV  
Maximum peak anode current  2 1 A  
Maximum average anode current  0.5 0.25 A  
Maximum frequency for above ratings  500 150 c/s  
Ambient temperature range  -55 to -55 to +75 +75 °C  
Maximum voltage drop  14 14 V
TYPICAL OPERATING CONDITIONS

The above tables suitable circuits for this rectifier, and shows their safe maximum input and output conditions. The values are based on sine wave input and the use of a suitable choke input filter.

This rectifier being directly heated, it is recommended that the output circuit be taken from the mid-point of the filament supply transformer secondary winding.

For details of the circuits referred to, see sheet K—8 in the introduction to this handbook.
