TWIN TRIODE AMPLIFIER OSCILLATOR

The RK-33 is a heater type twin triode amplifier tube having an isolantite base. It is designed for use in circuits where but one triode is operated at the maximum ratings. One triode may be operated at the maximum ratings as a Class C amplifier or oscillator while the other triode is operated as a low power oscillator, resistance coupled amplifier or detector.

A-F AMPLIFIER—CLASS A—ONE TRIODE

MAXIMUM RATINGS

D.C. Plate Voltage ..................................... 250 volts
Plate Dissipation ..................................... 2.5 watts

TYPICAL OPERATION

D.C. Plate Voltage ..................................... 250 volts
D.C. Grid Voltage ...................................... 16.5 volts
D.C. Plate Current ..................................... 8 ma
Amplification Factor .................................. 10.5
Plate Resistance ...................................... 8750 ohms
Transconductance ..................................... 1200 μmhos
Load Resistance ........................................ 20000 ohms

R-F POWER AMPLIFIER—CLASS C—TELEGRAPHY—ONE TRIODE

MAXIMUM RATINGS

D.C. Plate Voltage ..................................... 250 volts
D.C. Grid Voltage ...................................... 60 volts
D.C. Plate Current ..................................... 6 ma
D.C. Grid Current ...................................... 6 ma
Peak R-F Input Voltage: ................................ 100 volts
R-F Driving Power ..................................... 0.54 watts
Power Output .......................................... 3.5 watts

TYPICAL OPERATION

D.C. Plate Voltage ..................................... 250 volts
D.C. Grid Voltage ...................................... 60 volts
D.C. Plate Current ..................................... 20 ma
D.C. Grid Current ...................................... 6 ma
Peak R-F Input Voltage: ................................ 100 volts
R-F Driving Power ..................................... 0.54 watts
Power Output .......................................... 3.5 watts

OPERATING NOTES

FREQUENCY RANGE

One triode of the RK-33 may be operated at the maximum ratings at frequencies up to 60 megacycles. Above 60 megacycles the reduced efficiency realized requires that the plate voltage be reduced to prevent the plate dissipation from exceeding the maximum rated value.

BIAS

At least 15 volts of fixed bias should be used with 250 volts on the plate to protect the tube in case of failure of the bias or excitation.

PLATE TEMPERATURE

The plate of the RK-33 will not show color when operated at the maximum rated plate dissipation. Dissipation above the rated value should be avoided.

AVERAGE PLATE CHARACTERISTICS

ONE TRIODE

$E_p = 6.3 \text{ V}$
