TELEVISION MONITOR TUBE

Direct viewing television tube with 9-in. diameter metal-backed screen, magnetic deflection and low voltage electrostatic focusing lens. Primarily intended for use as a television studio monitor tube.

This data should be read in conjunction with GENERAL OPERATIONAL RECOMMENDATIONS—CATHODE RAY TUBES, included in this volume of the handbook.

HEATER

Suitable for series or parallel operation

\[ V_h \quad 6.3 \quad \text{V} \]
\[ I_h \quad 300 \quad \text{mA} \]

**Note** (applies to series operation only). The surge heater voltage must not exceed \(9.5V_{r.m.s}\) when the supply is switched on. When used in a series heater chain a current limiting device may be necessary in the circuit to ensure that this voltage is not exceeded.

CAPACITANCES

\[
\begin{align*}
C_{g_{..a11}} & \quad <8.0 \quad \text{pF} \\
C_{k_{..a11}} & \quad <8.0 \quad \text{pF} \\
C_{a_{2_{..a11}}-..a_{11}} & \quad 700 \quad \text{pF}
\end{align*}
\]

SCREEN

Metal-backed
Fluorescent colour white
Useful screen diameter 200 mm

FOCUSBING

Low voltage electrostatic

DEFLECTION

Double magnetic

MOUNTING POSITION

Any, except vertical with the screen downward and the axis of the tube making an angle of less than 20° with the vertical.

The tube socket should not be rigidly mounted but should have flexible leads and be allowed to move freely.

TYPICAL OPERATING CONDITIONS

\[
\begin{align*}
V_{a_{1_{..a11}}} & \quad 12 \quad \text{kV} \\
V_{a_{1_{..a11}}+..a_{11}} & \quad 300 \quad \text{V} \\
**V_{a_{3}} \quad (\text{focusing electrode}) & \quad -200 \text{ to } +200 \quad \text{V} \\
I_{a_{3}} & \quad -15 \text{ to } +15 \quad \mu\text{A} \\
V_{K} \quad (\text{for cut-off}) & \quad -30 \text{ to } -70 \quad \text{V}
\end{align*}
\]

**With the small change in focus spot size with variation of focus voltage the limit of -200 to +200V is such that an acceptable focus quality is obtained within this range. If it is required to pass through the point of focus a voltage of at least -300 to +300V will be required.
TELEVISION MONITOR TUBE

Direct viewing television tube with 9-in. diameter metal-backed screen, magnetic deflection and low voltage electrostatic focusing lens. Primarily intended for use as a television studio monitor tube.

*The d.c. value of grid bias must not be allowed to become positive with respect to the cathode, except during the period immediately after switching the receiver on or off when it may be allowed to rise to ††V. The maximum positive grid excursion of the video signal may reach 2V and at this voltage the grid current may be expected to be approximately 2mA.

‡The product of V_{a2} and I_t (average value for the whole screen) must not exceed 6W.

†In order to avoid excessive hum the a.c. component of V_{h-k} should be as low as possible (<20V_{r.m.s.}).

††During a warming-up period not exceeding 45sec.

§When the heater is in a series chain, or earthed, Z_k max. is 100kΩ, where Z_k is the 50c/s impedance between earth and the cathode. When the heater is supplied from a separate transformer R_{h-k} max. is 1MΩ.
