- Overall length only of 16 cm (6 3/16")
- A brilliant spot
- No deflection defocusing
- Asymmetric deflection
- Different screen types

The Philips Cathode Ray Tube DG 7-6 with its 7 cm (3") screen, gives ample screen area and spot-brilliance for small and easily transportable low-cost oscilloscopes.

Electron gun of the cathode-ray tube DG 7-6

$D_2$,$D_2'$ — plates for horizontal deflection
$D_1$,$D_1'$ — plates for vertical deflection
$g_3$ — control grid
$g_2$ — focusing electrode
$g_1$ — electrodes for pre-deflection acceleration
The Philips Cathode-Ray Tube DG 7-6 has the following main features:

Thanks to the small dimensions and electrical characteristics, this tube will give outstanding service in all applications where low-cost, light-weight apparatus for oscilloscopy are of prime importance.

800 Volts accelerating voltage; which can easily be obtained from a relatively simple high tension supply.

A brilliant spot owing to excellent screen properties.

A remarkably good picture over the entire screen surface.

Asymmetric deflection, asking only a simple design of the timebase.

For various applications different screen types available:

G. A green screen for oscilloscopy and recording of medium- and high-frequency phenomena.

B. A blue screen for photographic recording of non-recurrent high-speed phenomena.

P. A double-layer screen with bluish fluorescence for oscilloscopy and recording of low-frequency and low-speed non-recurrent phenomena.

R. A greenish-yellow screen for oscilloscopy and recording of low- and medium-frequency signals. *)

*) Detailed information on all phosphors is given in a folder dealing with data and characteristics of Philips phosphors.

Operating characteristics

Grid no. 3 voltage \( V_{E_3} = 800 \) V
Grid no. 2 voltage \( V_{E_2} = 200 - 300 \) V
Negative grid no. 1 voltage for visual extinction of the focused spot \(-V_{E_1} = 0 - 50 \) V
Deflection sensitivity \( D_1D_1' = 0.25 \) mm/V
Deflection sensitivity \( D_2D_2' = 0.16 \) mm/V

Limiting values

Grid no. 3 voltage \( V_{E_3} = \) max. 1000 V
\( \min. 800 \) V
Grid no. 2 voltage \( V_{E_2} = \) max. 400 V
\( \min. 100 \) V
Grid no. 1 voltage (negative value) \(-V_{E_1} = \) max. 0 V
\( +V_{E_1} = \) max. 0 V
Peak voltage on deflection plates \( D_1D_1' = \) max. 450 V
Peak voltage on deflection plates \( D_2D_2' = \) max. 750 V
Screen dissipation \( W_i = \) max. 3 mW/cm²

Maximum circuit values

Deflection plate circuit resistance \( R_D = \) max. 5 Mohm
Grid no. 1 circuit resistance \( R_{E_1} = \) max. 0.5 Mohm

MECHANICAL DATA

Mounting position: any

Nett weight: 140 g (5 ounces)

Dimensions: overall length 16 cm (6 5/16")
screen diameter 7 cm (3")

*) Measured on a circle of 50 mm diameter.
G-screen

The green fluorescent G-screen provides high visual contrast under conditions of normal ambient illumination. It has medium persistence and can be used for visual observation of recurrent phenomena in the majority of applications.

Persistence characteristic of a G-screen.

Brightness of a G-screen as a function of the screen current per square cm screen area, with the accelerating potential as a parameter.

Relative spectral energy distribution of a G-screen.
