CHARACTERISTICS

GENERAL DATA
Focusing Method ........................................... Electrostatic
Deflection Method ........................................ Magnetic
Deflection Angles (Approx.)
  Horizontal ........................................... 102 Degrees
  Diagonal ............................................... 114 Degrees
  Vertical ............................................... 86 Degrees
Phosphor .................................................. Aluminized P4
Fluorescence ............................................. White
Persistence ................................................ Short to Medium
Faceplate .................................................. Bonded Shield
  (Gray Filter Glass Safety Plate Laminated
   Directly to Face of Tube)
Light Transmittance of Faceplate Assembly (Approx.) 44 Percent

ELECTRICAL DATA
Heater Voltage ............................................ 6.3 Volts
Heater Current .......................................... 0.30 ± 5% Ampere
Heater Warm-up Time¹ ................................... 11 Seconds
Direct Interelectrode Capacitances (Approx.)
  Cathode to All Other Electrodes ...................... 5 μf
  Grid No. 1 to All Other Electrodes .................. 6 μf
  External Conductive Coating to Anode² ............... 1500 μf Max.
                                                                   1000 μf Min.

MECHANICAL DATA
Minimum Useful Screen Dimensions (Maximum Assured)
  Height ............................................ 12 1/16 Inches
  Width ................................................ 15 5/16 Inches
  Diagonal ............................................ 17¾ Inches
  Area .................................................. 174 Sq.Inches
Neck Length ............................................. 5 1/8 ± 1/8 Inches
Overall Length .......................................... 12 5/8 ± 5/16 Inches
Bulb ..................................................... 6C49 Exp. #5 or Equiv.
Safety Plate ............................................ FP159A
Bulb Contact (Recessed Small Cavity Cap) ............ J1-21
Base ..................................................... B7-208
Basing ................................................... 8HR
Weight (Approx.) ........................................ 18½ Pounds

RATINGS
MAXIMUM RATINGS (Design Maximum Values) Grid Drive Service
Maximum Anode Voltage .................................. 20,000 Volts dc
Minimum Anode Voltage .................................. 12,000 Volts dc
Grid No. 4 Voltage (Focusing Electrode) ............... -550 to +1100 Volts dc
Grid No. 2 Voltage ....................................... 550 Volts dc
Grid No. 1 Voltage
  Negative Bias Value .................................. 155 Volts dc
  Negative Peak Value ................................ 220 Volts dc
  Positive Bias Value .................................. 0 Volts dc
  Positive Peak Value .................................. 2 Volts dc
Peak Heater-Cathode Voltage
  Heater Negative with Respect to Cathode
    During Warm-up Period not to Exceed 15 Seconds .. 450 Volts
    After Equipment Warm-up Period ................... 200 Volts
  Heater Positive with Respect to Cathode ............ 200 Volts

TYPICAL OPERATING CONDITIONS (Grid Drive Service)

Anode Voltage ........................................ 16,000 Volts dc
Grid No. 4 Voltage for Focus ......................... 0 to +400 Volts dc
Grid No. 2 Voltage .................................... 300 Volts dc
Grid No. 1 Voltage Required for Cutoff\(^2\) ............. −35 to −72 Volts dc

CIRCUIT VALUES

Grid No. 1 Circuit Resistance ......................... 1.5 Megohms Max.

NOTES:

1. Heater warm-up time is defined as the time required for the voltage across the heater to reach 80% of the rated heater voltage after applying four (4) times rated heater voltage to a circuit consisting of the tube heater in series with a resistance equal to three (3) times the rated heater voltage divided by the rated heater current.

2. External conductive coating must be grounded.

3. Visual extinction of focused raster. Extinction of stationary focused spot will require that these values be about 5 volts, more negative.

WARNING:

X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.
OUTLINE

DIAGRAM NOTES:

1. Reference line is determined by place C-C' of JEDEC No. 126 Reference Line Gauge, when the gauge is seated against the bulb.

2. Base Pin No. 4 aligns with horizontal centerline (A-A') within 30° and is on same side as anode contact, J1-21.

3. Planes perpendicular to tube axis and passing through points X, Y and Z are located as follows:

   Plane tangent to crown of face to plane of X: 0.500" Nominal  
   Plane of X to plane of Y = .421" ± .025"  
   Plane of X to plane of Z = .738" ± .045"
