## RADAR DISPLAY TUBE TYPE 16AKP7

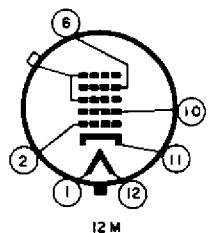

The 16AKP7 is an electrostatic focus, magnetic deflection round glass radar display tube. The screen is aluminized to increase brightness and uses a P7 phosphor for improved viewing characteristics. The 16AKP7 features a straight no-ion-trap gun which produces a very narrow line which gives the tube high resolution capabilities.

Grid 1 Voltage■ .....	-35 to -75	Volts

♦ With the combined grid 1 bias voltage and video-signal voltage adjusted to give an anode current of 100 microamperes on a 13-1/4" by 13-1/4" raster.

■ For visual extinction of focused spot.

▲ A typical line width of 0.025" may be expected with an anode current of 100 microamperes.

● Protective resistance in the G2 and focus electrode circuits is advisable to prevent damage to the tube.

**NOTE 1:** The plane through the tube axis and the base pin No. 6 may vary from the plane through the tube axis and the bulb terminal by an angular tolerance of  $\pm 30^\circ$  measured about the tube axis. The bulb terminal is on the same side of the tube as pin No. 6.

**NOTE 2:** The socket should not be mounted rigidly but it should be allowed to move freely and it should have flexible leads. The bottom circumference of the base shell will lie within a circle concentric with the bulb axis and having a diameter of  $2 \frac{3}{4}$ ".
