GENERAL DATA
Focusing Method .................................. Electrostatic
Deflecting Method .................................. Magnetic
Deflecting Angle - Diagonal (Approx.) ................. 92 Degrees
Horizontal ........................................ 80 Degrees
Vertical .......................................... 65 Degrees
Phosphor ........................................ Ph Aluminized
Fluorescence ........................................ White
Persistence ......................................... Sh - Medium
Faceplate ......................................... Gray Filter Glass
Light Transmission ................................. 76% (Approx.)

ELECTRICAL DATA
Heater Voltage ....................................... 6.3 Volts
Heater Current .................................... 0.6 Ampere ± 5%
Direct Interelectrode Capacitances (Approx.)
Cathode to All Other Electrodes ..................... 5 uuf
Grid No. 1 to All Other Electrodes .................. 6 uuf
Ion Trap Magnet .................................... None

MECHANICAL DATA
Minimum Useful Screen Dimensions .............. 15 1/8 x 12 Inches
Minimum Useful Screen Area (Approx.) .......... 172 Sq. In.
Bulb Contact (Recessed Small Cavity Cap) ....... J1-21
Base .................................................. B6-203
Basing ............................................... 12L
J1-21 Contact Aligns with Pin Position No. 6 ± 30 Degrees
Bulb Weight ......................................... 14 3/4 Lbs

RATINGS
MAXIMUM RATINGS (Design Maximum Values)
Anode Voltage (Note 1) ............................ 20,000 Volts dc
Grid No. 4 Voltage (Focusing electrode) .......... -550 To +1100 Volts dc
Grid No. 2 Voltage ................................ 550 Volts dc
Grid No. 1 Voltage
Negative Bias Value ................................ 15± Volts dc
Positive Bias Value ............................... 0 Volts dc
Positive Peak Value ............................... 2 Volts
Peak Heater-Cathode Voltage (Note 2)
Heater Negative with Respect to Cathode
During Warm-up Period Not to exceed .......... 15 Sec.|50 Volts dc
After Equipment Warm-up Period ............... 200 Volts dc
Heater Positive with Respect to Cathode ......... 200 Volts dc

RECOMMENDED OPERATING CONDITIONS
Anode Voltage ..................................... 16,000 Volts dc
Grid No. 4 Voltage (Note 3) ...................... 0 to ±400 Volts dc
Grid No. 2 Voltage ................................ 100 Volts dc
Grid No. 1 Voltage (Note 4) ...................... -36 To -94 Volts dc

CIRCUIT VALUES
Grid No. 1 Circuit Resistance ..................... 1.5 Max. Megohm
External Conductive Coating to Anode
Capacitance ...................................... 1000 ± 5000

THE 19BF4 IS A DIRECT VIEW PICTURE TUBE FOR USE IN TELEVISION RECEIVERS AND INCLUDES SUCH FEATURES AS:
- A short straight electron gun not requiring an ion trap.
- A diagonal deflection angle of 92°.
- A gray tinted face.
- Rectangular glass type.
- Flat compound face.
- Electrostatic Focus.
- Metal Backed Screen.

NOTES
1. Grid No. 5, Grid No. 3, and the collector are connected together within the tube, and referred to here-in as anode.
2. Cathode should be returned to one side or to the mid-tap of the heater transformer winding.
3. For focus with anode current of 100 ua and 15 1/8" x 12" raster.
4. Visual extinction of focused raster. Extinction of stationary focused spot will require that these values be about 5 volts more negative.

THOMAS ELECTRONICS, INC.
118 5TH STREET,
PASSEIC, NEW JERSEY

11/27/60
DIAGRAM NOTES:

1. Reference line is determined by plane C-C' of JEDEC No. 116 Reference Line Gauge, when the gauge is seated against the bulb.

2. Base Pin No. 6 aligns with horizontal centerline (A-A') within 30° and is on same side as anode contact, J1-Z1.

3. Dimensions are in inches.

4. External Conductive Coating must be grounded.

5. Anti-corona coating around connector.

6. Bulge at splice-line seal may increase the indicated maximum value for envelope width, diagonal, and height by not more than 1/4", but at any point around the seal, the bulge will not protrude more than 1/8" beyond the envelope width, diagonal, and height.

7. The tube should be supported on both sides of the bulge. The mechanism used should provide clearance for the maximum dimensions of the bulge. Tube mounting and yoke clamp supports must be spaced from the tube by the use of cushioning pads. Material to be used should be asphalt impregnated felt or equivalent.
