RECTIFIER TUBE

EL 3C
RMA Type 4B24

Full-wave Rectifier
Tantalum Anode and Xenon Gas Filling

D-c. Amperes Output (Max. Rated)
D-c. Meter Value - Continuous 2.5
D-c. Meter Value - Overload less than 3 sec. 3.7
Oscillograph Peak-Continuously recurring 10.0

Peak Inverse Volts (Max. Instantaneous) 725
A-c. Volts per Anode 12-250

Average Arc Drop Volts
Highest Tube 10
Average Tube 8

Filament
Volts 2.5
Amperes 11.5±1
Heating Time Approx. 30 secs.

Starting Volts (Instantaneous)
Highest Tube 15
Average Tube 12

Max. A-c. Short-circuit Current (0.1 sec.) 150A

Overall Dimensions 2 x 742
Weight 5 Ozs.

Connections #412 4-prong Industrial Base*

Ambient Temperature Limits -40 to +65°C

It is preferable to light the filament before applying d-c. load. If omitted, each cold start consumes tube life and at anode voltages above 115V may blow the primary fuse.

The socket should be so connected that the a-c. voltage measured from each filament contact is lower to the anode contact directly opposite than to the anode contact diagonally opposite with the tube removed and some load connected. This phasing of the filament voltage relative to the anode voltage insures a lower arc drop and somewhat longer life.

*This tube is also available with a special 4-prong tungar type base, the type number being EL 3CP.
