Notes

(1) Limitations beyond which normal tube performance and tube life may be impaired.
(2) Forces in any direction as applied by the Navy Type High Impact (Flyweight) Shock Machine for Electronic Devices, or equivalent.
(3) Forces in any direction applied gradually, as in centrifuge.
(4) Vibrational forces in any direction at 60 cycles per second for a period exceeding 100 hours.
(5) With external shield of 0.405 inch diameter connected to cathode.
(6) Tube life and reliability of performance are directly related to the degree of regulation of the heater voltage to its center-rated value of 6.3 volts.
(7) Across plate resistor of 10,000 ohms, with applied vibrational acceleration of 15 g at 10 cycles per second.
