(1) Limitations beyond which normal tube performance and tube life may be impaired.

(2) Forces in any direction as applied by the Navy Type High Impact (Flyweight) Shock Machine for Electronic Devices, or equivalent.

(3) Forces in any direction applied gradually, as in centrifuge.

(4) Vibrational forces in any direction at 60 cycles per second for a period exceeding 100 hours.

(5) With external shield of 0.405 inch diameter connected to heater.

(6) Plate to cathode, heater, internal shield and external shield.

(7) Cathode to heater, plate, internal shield and external shield.

(8) Tube life and reliability of performance are directly related to the degree of regulation of the heater voltage to its center-rated value of 6.3 volts.
