GENERAL DESCRIPTION

Application: The Hytron 6Q7GT is a cathode type duplex tube consisting of a high-mu triode and two diodes in a single envelope. The combined functions of detection, automatic volume control, and audio amplification can be performed by this tube in properly designed circuits.

The Hytron 6Q7GT is a glass tube equipped with a small octal base and may be used interchangeably with the Hytron 6Q7G glass tube.

Physical Characteristics: Bulb T-9C

RATING AND CHARACTERISTICS

Heater:
Voltage 6.3 Volts AC or DC
Current .5 Ampere

Note: Voltage between heater and cathode should be kept at a minimum if direct connection is not possible.

AMPLIFIER OPERATION (CLASS A RESISTANCE COUPLED)

*Plate Supply Voltage 100 150 180 250 Volts
Grid Voltage -1.5 -1.6 -1.75 -1.9 Volts
Plate Current .11 to .07 .12 to .11 .16 to .18 .44 to .58 Milliamperes
Cathode Resistor 13500 to 21400 8700 to 14500 6700 to 11000 4700 to 7300 Ohms
Plate Resistor .25 to .35 .25 to .5 .25 to .5 .25 to .5 Megohms
Grid Resistor .5 .5 .5 .5 Megohms
Voltage Amplification 33 to 36 39 to 41 42 to 44 43 to 45

*Effective plate voltage will be this value minus the voltage drop in the plate resistor. Voltage at plate should not exceed 250 volts.

**Grid resistor for the following tube.

**Approximate.

AMPLIFIER OPERATION (CLASS A TRANSFORMER COUPLED)

Plate Voltage 100 250 Max. Volts
Grid Voltage -1.5 -3.0 Volts
Plate Current .35 1.0 Milliamperes
Plate Resistance 87500 58000 Ohms
Amplification Factor 70 70
Mutual Conductance 800 1200 Micromhos

DIODE OPERATION

The two diode plates are mounted about the common cathode sleeve but are otherwise isolated from each other and the triode unit. These diodes may be operated singly as half-wave rectifiers, tied together as a single half-wave rectifier or operated in full-wave arrangement. The full-wave circuit will provide about half the voltage obtainable from the half-wave circuit.

Automatic volume control may be effected by applying the D.C. voltage developed in the diode to the control elements of preceding amplifier tubes. This D.C. voltage may be obtained from the same diode circuit as used for detection or from one of the diode plates operating separately as a bias rectifier.

from RMA release #134, April 11, 1938
Announcement of Electron Device Type Reregistration

Release No. 134D (Tentative)*

March 29, 1960

The Joint Electron Device Engineering Council announced the registration of the following electron device designation

6Q7GT

on April 11, 1938, Release No. 134, under the sponsorship of CBS Electronics, Danvers, Massachusetts.

The Radio Corporation of America, Harrison, New Jersey, now proposes reregistration based on the following data:

<table>
<thead>
<tr>
<th>ITEM</th>
<th>AS REGISTERED</th>
<th>AS PROPOSED</th>
</tr>
</thead>
<tbody>
<tr>
<td>Direct Interelectrode Capacitances*</td>
<td>none</td>
<td>0.001 µf</td>
</tr>
<tr>
<td>Triode grid to #2 diode plate (max.)</td>
<td>none</td>
<td>0.001 µf</td>
</tr>
<tr>
<td>Triode grid to #1 diode plate (max.)</td>
<td>none</td>
<td>1.7 µf</td>
</tr>
<tr>
<td>#2 diode plate to H + K + pin 1</td>
<td>none</td>
<td>2.2 µf</td>
</tr>
<tr>
<td>#1 diode plate to H + K + pin 1</td>
<td>none</td>
<td></td>
</tr>
</tbody>
</table>

*Without external shield.

*Unless valid objection to this reregistration is lodged with the EIA Standards Laboratory prior to April 29, 1960, this reregistration will be made and this information will be considered "FINAL" WITHOUT FURTHER NOTICE!
