

# 33JV6

## COMPACTRON BEAM PENTODE

FOR TV HORIZONTAL-DEFLECTION AMPLIFIER APPLICATIONS

### DESCRIPTION AND RATING

The 33JV6 is a compactron beam-power pentode designed for use as the horizontal-deflection amplifier in television receivers. A separate connection is provided for the beam plates to minimize "snivets".

### GENERAL

#### ELECTRICAL

Cathode - Coated Unipotential  
 Heater Characteristics and Ratings  
 Heater Voltage, AC or DC\* . . . . . 33 Volts  
 Heater Current† . . . . . 0.3±0.02 Amperes  
 Heater Warm-up Time, Average§. . . . 11 Seconds  
 Direct Interelectrode Capacitances, approximate¶  
 Grid-Number 1 to Plate: (g1 to p) . 0.4 pf  
 Input: g1 to (h + k + g2 + b.p.) . 22 pf  
 Output: p to (h + k + g2 + b.p.) . 9.0 pf

#### MECHANICAL

Operating Position - Any  
 Envelope - T-12, Glass  
 Base - E12-74, Button 12-Pin  
 Outline Drawing - EIA 12-58  
 Maximum Diameter . . . . . 1.563 Inches  
 Maximum Over-all Length. . . . . 3.375 Inches  
 Maximum Seated Height . . . . . 3.000 Inches

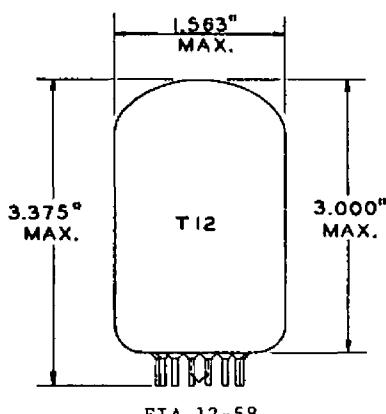

### MAXIMUM RATINGS

Design-Maximum ratings are limiting values of operating and environmental conditions applicable to a bogey electron tube of a specified type as defined by its published data and should not be exceeded under the worst probable conditions.

The tube manufacturer chooses these values to provide acceptable serviceability of the tube, making allowance for the effects of changes in operating conditions due to variations in the characteristics of the tube under consideration.

The equipment manufacturer should design so that initially and throughout life no design-maximum value for the intended service is exceeded with a bogey tube under the worst probable operating conditions with respect to supply-voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, environmental conditions, and variations in the characteristics of all other electron devices in the equipment.

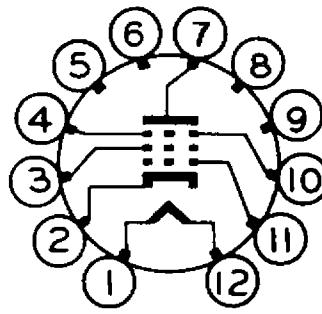

#### PHYSICAL DIMENSIONS

#### TERMINAL CONNECTIONS

- Pin 1 - Heater
- Pin 2 - Cathode
- Pin 3 - Grid Number 2 (Screen)
- Pin 4 - Beam Plates
- Pin 5 - No Connection
- Pin 6 - No Connection
- Pin 7 - Plate
- Pin 8 - No Connection
- Pin 9 - No Connection
- Pin 10 - Beam Plates
- Pin 11 - Grid Number 1
- Pin 12 - Heater

#### BASING DIAGRAM

EIA 12FK

The tubes and arrangements disclosed herein may be covered by patents of General Electric Company or others. Neither the disclosure of any information herein nor the sale of tubes by General Electric Company conveys any license under patent claims covering combinations of tubes with other devices or elements. In the absence of an

express written agreement to the contrary, General Electric Company assumes no liability for patent infringement arising out of any use of the tubes with other devices or elements by any purchaser of tubes or others.

## MAXIMUM RATINGS (Cont'd)

## HORIZONTAL-DEFLECTION AMPLIFIER SERVICE#—DESIGN-MAXIMUM VALUES

DC Plate-Supply Voltage (Boost + DC Power Supply) . . . . .	770	Volts
Peak Positive Pulse Plate Voltage . . . . .	6000	Volts
Peak Negative Pulse Plate Voltage . . . . .	1500	Volts
Positive DC Beam Plate Voltage . . . . .	70	Volts
Screen Voltage. . . . .	220	Volts
Negative DC Grid-Number 1 Voltage . . . . .	55	Volts
Peak Negative Grid-Number 1 Voltage. . . . .	330	Volts
Plate Dissipation <sup>A</sup> . . . . .	18	Watts
Screen Dissipation . . . . .	3.5	Watts
DC Cathode Current . . . . .	230	Milliamperes
Peak Cathode Current. . . . .	800	Milliamperes
Heater-Cathode Voltage		
Heater Positive with Respect to Cathode		
DC Component . . . . .	100	Volts
Total DC and Peak. . . . .	200	Volts
Heater Negative with Respect to Cathode		
Total DC and Peak. . . . .	200	Volts
Grid-Number 1 Circuit Resistance. . . . .	1.0	Megohms
Bulb Temperature at Hottest Point . . . . .	220	C

## CHARACTERISTICS AND TYPICAL OPERATION

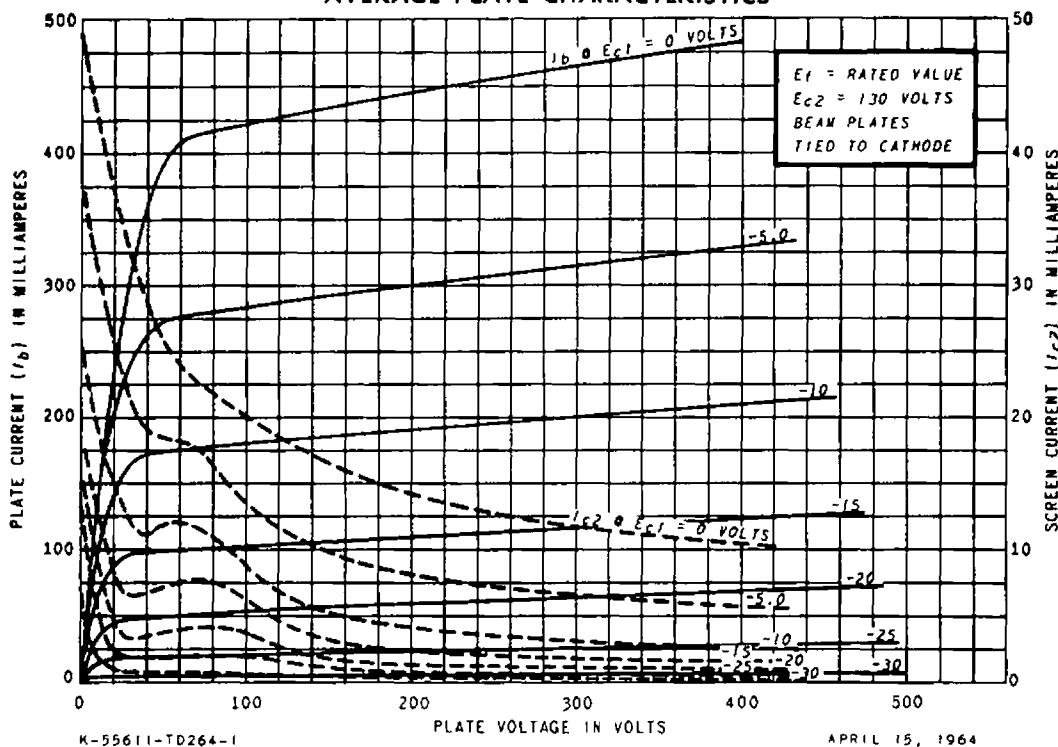

## AVERAGE CHARACTERISTICS

Plate Voltage . . . . .	5000	60	130	Volts
Beam Plates, Connected to Cathode at Socket				
Screen Voltage. . . . .	130	130	130	Volts
Grid-Number 1 Voltage . . . . .	---	0**	-20	Volts
Plate Resistance, approximate. . . . .	---	---	11000	Ohms
Transconductance . . . . .	---	---	9100	Micromhos
Plate Current . . . . .	---	410	50	Milliamperes
Screen Current. . . . .	---	24	1.75	Milliamperes
Grid-Number 1 Voltage, approximate $I_b = 1.0$ Milliamperes . . . . .	-66	---	-33	Volts
Triode Amplification Factor##. . . . .	---	---	4.7	

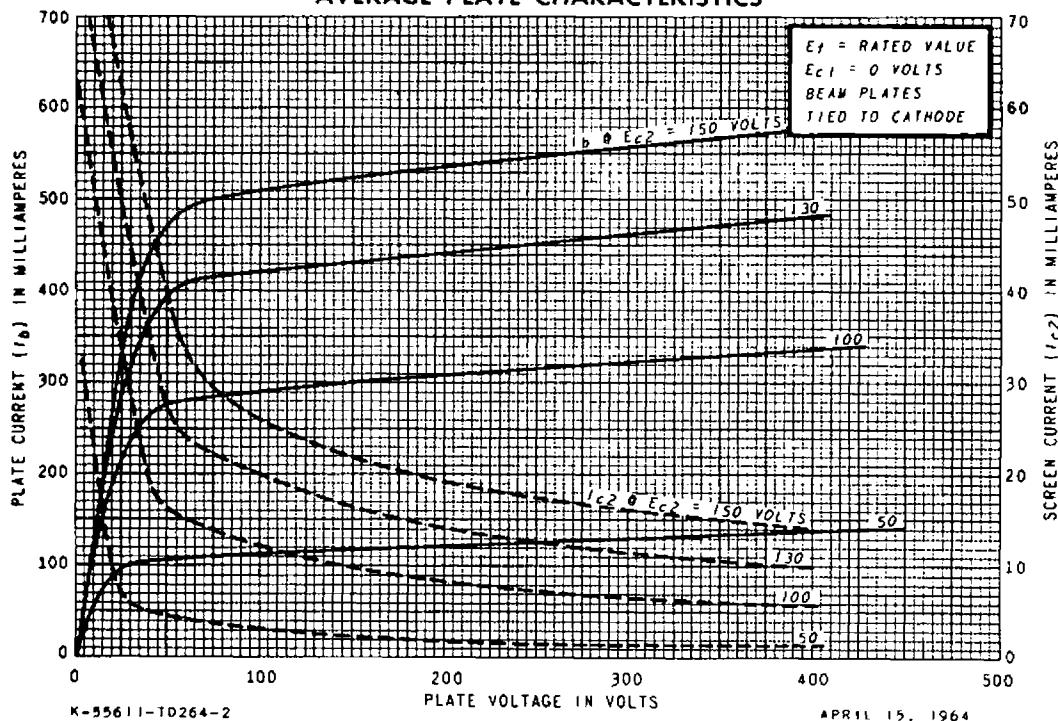

## NOTES

- \* Heater voltage for a bogey value tube at  $I_f = 0.3$  amperes.
- # The equipment designer should design the equipment so that heater current is centered at the specified bogey value, with heater supply variations restricted to maintain heater current within the specified tolerance.
- § The time required for the voltage across the heater to reach 80 percent of the bogey value after applying 4 times the bogey heater voltage to a circuit consisting of the tube heater in series with a resistance equal to 3 times the bogey heater voltage divided by the bogey heater current.
- ¶ Without external shield.
- ¶ For operation in a 525-line, 30-frame television system as described in "Standards of Good Engineering Practice Concerning Television Broadcast Stations", Federal Communications Commission. The duty cycle of the voltage pulse must not exceed 15 percent of one scanning cycle.
- △ In stages operating with grid-leak bias, an adequate cathode-bias resistor or other suitable means is required to protect the tube in the absence of excitation.
- \*\* Applied for short interval (two seconds maximum) so as not to damage tube.
- ## Triode connection (screen tied to plate) with  $E_b = E_c2 = 130$  volts and  $E_{cl} = -20$  volts.
